

THE DATASHEET OF ADG704BRMZ-REEL

FEATURES

+1.8 V to +5.5 V Single Supply
2.5 Ω (Typ) On Resistance
Low On-Resistance Flatness
-3 dB Bandwidth >200 MHz
Rail-to-Rail Operation
10-Lead μ SOIC Package
Fast Switching Times
 t_{ON} 20 ns
 t_{OFF} 13 ns
Typical Power Consumption (<0.01 μ W)
TTL/CMOS Compatible

APPLICATIONS

Battery Powered Systems
Communication Systems
Sample-and-Hold Systems
Audio Signal Routing
Data Acquisition System
Video Switching

GENERAL DESCRIPTION

The ADG704 is a CMOS analog multiplexer, comprising four single channels. This multiplexer is designed on an advanced submicron process that provides low power dissipation yet gives high switching speed, low on resistance, low leakage currents and high bandwidths.

The on resistance profile is very flat over the full analog signal range. This ensures excellent linearity and low distortion when switching audio signals. Fast switching speed also makes the part suitable for video signal switching.

The ADG704 can operate from a single supply range of +1.8 V to +5.5 V, making it ideal for use in battery powered instruments and with the new generation of DACs and ADCs from Analog Devices.

The ADG704 switches one of four inputs to a common output, D, as determined by the 3-bit binary address lines, A0, A1 and EN. A Logic "0" on the EN pin disables the device.

Each switch of the ADG704 conducts equally well in both directions when ON. The ADG704 exhibits break-before-make switching action.

The ADG704 is available in 10-lead μ SOIC package.

FUNCTIONAL BLOCK DIAGRAM

PRODUCT HIGHLIGHTS

- +1.8 V to +5.5 V Single Supply Operation.
The ADG704 offers high performance and is fully specified and guaranteed with +3 V and +5 V supply rails.
- Very Low R_{ON} (4.5 Ω Max at 5 V, 8 Ω Max at 3 V).
At supply voltage of +1.8 V, R_{ON} is typically 35 Ω over the temperature range.
- Low On-Resistance Flatness.
- 3 dB Bandwidth Greater than 200 MHz.
- Low Power Dissipation.
CMOS construction ensures low power dissipation.
- Fast t_{ON}/t_{OFF} .
- Break-Before-Make Switching Action.
- 10-Lead μ SOIC Package.

REV. A

ADG704

ABSOLUTE MAXIMUM RATINGS¹

(T_A = +25°C unless otherwise noted)

| | |
|-------------------------------------|--|
| V _{DD} to GND | -0.3 V to +6 V |
| Analog, Digital Inputs ² | -0.3 V to V _{DD} +0.3 V or 30 mA, Whichever Occurs First |
| Continuous Current, S or D | 30 mA |
| Peak Current, S or D | 100 mA (Pulsed at 1 ms, 10% Duty Cycle Max) |
| Operating Temperature Range | |
| Industrial (B Version) | -40°C to +85°C |
| Storage Temperature Range | -65°C to +150°C |
| Junction Temperature | +150°C |
| μSOIC Package, Power Dissipation | 315 mW |
| θ _{JA} Thermal Impedance | 206°C/W |
| Lead Temperature, Soldering | |
| Vapor Phase (60 sec) | +215°C |
| Infrared (15 sec) | +220°C |
| ESD | 2 kV |

NOTES

¹Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those listed in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Only one absolute maximum rating may be applied at any one time.

²Overvoltages at IN, S or D will be clamped by internal diodes. Current should be limited to the maximum ratings given.

ORDERING GUIDE

| Model | Temperature Range | Brand ¹ | Package Option ² |
|-----------|-------------------|--------------------|-----------------------------|
| ADG704BRM | -40°C to +85°C | S9B | RM-10 |

NOTES

¹Brand = Due to small package size, these three characters represent the part number.

²RM = μSOIC.

PIN CONFIGURATION (10-Lead μSOIC)

TERMINOLOGY

| | |
|--------------------------------------|---|
| V _{DD} | Most positive power supply potential. |
| GND | Ground (0 V) reference. |
| S | Source terminal. May be an input or output. |
| D | Drain terminal. May be an input or output. |
| A0, A1 | Logic control inputs. |
| EN | Logic control input. |
| R _{ON} | Ohmic resistance between D and S. |
| ΔR _{ON} | On resistance match between any two channels i.e., R _{ONmax} –R _{ONmin} . |
| R _{FLAT(ON)} | Flatness is defined as the difference between the maximum and minimum value of on resistance as measured over the specified analog signal range. |
| I _D (OFF) | Drain leakage current with the switch “OFF.” |
| I _S (OFF) | Source leakage current with the switch “OFF.” |
| I _D , I _S (ON) | Channel leakage current with the switch “ON.” |
| V _D (V _S) | Analog voltage on terminals D, S. |
| C _S (OFF) | “OFF” switch source capacitance. |
| C _D (OFF) | “OFF” switch drain capacitance. |
| C _D , C _S (ON) | “ON” switch capacitance. |
| t _{ON} | Delay between applying the digital control input and the output switching on. See Test Circuit 4. |
| t _{OFF} | Delay between applying the digital control input and the output switching off. |
| t _D | “OFF” time or “ON” time measured between the 90% points of both switches, when switching from one address state to another. See Test Circuit 5. |
| Crosstalk | A measure of unwanted signal that is coupled through from one channel to another as a result of parasitic capacitance. |
| Off Isolation | A measure of unwanted signal coupling through an “OFF” switch. |
| Charge Injection | A measure of the glitch impulse transferred from the digital input to the analog output during switching. |
| Bandwidth | The frequency at which the output is attenuated by –3 dBs. |
| On Response | The frequency response of the “ON” switch. |
| On Loss | The voltage drop across the “ON” switch, seen on the On Response vs. Frequency plot as how many dBs the signal is away from 0 dB at very low frequencies. |

Table I. Truth Table

| A1 | A0 | EN | ON Switch |
|----|----|----|-----------|
| X | X | 0 | NONE |
| 0 | 0 | 1 | 1 |
| 0 | 1 | 1 | 2 |
| 1 | 0 | 1 | 3 |
| 1 | 1 | 1 | 4 |

CAUTION

ESD (electrostatic discharge) sensitive device. Electrostatic charges as high as 4000 V readily accumulate on the human body and test equipment and can discharge without detection. Although the ADG704 features proprietary ESD protection circuitry, permanent damage may occur on devices subjected to high energy electrostatic discharges. Therefore, proper ESD precautions are recommended to avoid performance degradation or loss of functionality.
