MC100EL30

5V ECL Triple D Flip-Flop with Set and Reset

The MC100EL30 is a triple master-slave D flip-flop with differential outputs. Data enters the master latch when the clock input is LOW and transfers to the slave upon a positive transition on the clock input.

In addition to a common Set input individual Reset inputs are provided for each flip flop. Both the Set and Reset inputs function asynchronous and overriding with respect to the clock inputs.
