

**THE DATASHEET OF
SN74ALVC7805-40DLR**

- Member of the Texas Instruments Widebus™ Family
- Low-Power Advanced CMOS Technology
- Operates From 3-V to 3.6-V V_{CC}
- Free-Running Read and Write Clocks Can Be Asynchronous or Coincident
- Read and Write Operations Synchronized to Independent System Clocks
- Half-Full Flag and Programmable Almost-Full/Almost-Empty Flag
- Bidirectional Configuration and Width Expansion Without Additional Logic
- Input-Ready Flag Synchronized to Write Clock
- Output-Ready Flag Synchronized to Read Clock
- Fast Access Times of 13 ns With a 50-pF Load and All Data Outputs Switching Simultaneously
- Data Rates up to 50 MHz
- Pin-to-Pin Compatible With SN74ACT7803, SN74ACT7805, and SN74ACT7813
- Packaged in Shrink Small-Outline 300-mil Package Using 25-mil Center-to-Center Lead Spacing

description

The SN74ALVC7805 is suited for buffering asynchronous data paths up to 50-MHz clock rates and 13-ns access times. This device is designed for 3-V to 3.6-V V_{CC} operation. Two devices can be configured for bidirectional data buffering without additional logic.

The write clock (WRTCLK) and read clock (RDCLK) are free running and can be asynchronous or coincident. Data is written to memory on the rising edge of WRTCLK when $\overline{WRTEN2}$ is low, and input ready (IR) is high. Data is read from memory on the rising edge of RDCLK when \overline{RDEN} , $\overline{OE1}$, and $\overline{OE2}$ are low and output ready (OR) is high. The first word written to memory is clocked through to the output buffer, regardless of the \overline{RDEN} , $\overline{OE1}$, and $\overline{OE2}$ levels. The OR flag indicates that valid data is present on the output buffer.

The FIFO can be reset asynchronously to WRTCLK and RDCLK. Reset (\overline{RESET}) must be asserted while at least four WRTCLK and four RDCLK rising edges occur to clear the synchronizing registers. Resetting the FIFO initializes the IR, OR, and half-full (HF) flags low and the almost-full/almost-empty (AF/AE) flag high. The FIFO must be reset upon power up.

The SN74ALVC7805 is characterized for operation from 0°C to 70°C.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

Widebus is a trademark of Texas Instruments Incorporated.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

POST OFFICE BOX 655303 • DALLAS, TEXAS 75265

logic symbol†

† This symbol is in accordance with ANSI/IEEE Std 91-1984 and IEC Publication 617-12.

functional block diagram

Terminal Functions

TERMINAL NAME	NO.	I/O	DESCRIPTION
AF/AE	24	O	Almost-full/almost-empty flag. Depth-offset values can be programmed for this flag, or the default value of 32 can be used for both the almost-empty offset (X) and the almost-full offset (Y). AF/AE is high when memory contains X or fewer words or (256 – Y) or more words. AF/AE is high after reset.
D0–D17	2–9, 11–12, 14–21	I	18-bit data input port
HF	22	O	Half-full flag. HF is high when the FIFO memory contains 128 or more words. HF is low after reset.
IR	28	O	Input-ready flag. IR is synchronized to the low-to-high transition of WRTCLK. When IR is low, the FIFO is full and writes are disabled. IR is low during reset and goes high on the second low-to-high transition of WRTCLK after reset.
$\overline{OE1}$ $\overline{OE2}$	56 30	I	Output enables. When $\overline{OE1}$, $\overline{OE2}$, and \overline{RDEN} are low and OR is high, data is read from the FIFO on a low-to-high transition of RDCLK. When either $\overline{OE1}$ or $\overline{OE2}$ is high, reads are disabled and the data outputs are in the high-impedance state.
OR	29	O	Output-ready flag. OR is synchronized to the low-to-high transition of RDCLK. When OR is low, the FIFO is empty and reads are disabled. Ready data is present on Q0–Q17 when OR is high. OR is low during reset and goes high on the third low-to-high transition of RDCLK after the first word is loaded to empty memory.
\overline{PEN}	23	I	Program enable. After reset and before the first word is written to the FIFO, the binary value on D0–D7 is latched as an AF/AE offset value when \overline{PEN} is low and WRTCLK is high.
Q0–Q17	33–34, 36–38, 40–43, 45–49, 51, 53–55	O	18-bit data output port. After the first valid write to empty memory, the first word is output on Q0–Q17 on the third rising edge of RDCLK. OR also is asserted high at this time to indicate ready data. When OR is low, the last word read from the FIFO is present on Q0–Q17.
RDCLK	32	I	Read clock. RDCLK is a continuous clock and can be asynchronous or coincident to WRTCLK. A low-to-high transition of RDCLK reads data from memory when $\overline{OE1}$, $\overline{OE2}$, and \overline{RDEN} are low and OR is high. OR is synchronous to the low-to-high transition of RDCLK.
\overline{RDEN}	31	I	Read enable. When \overline{RDEN} , $\overline{OE1}$, and $\overline{OE2}$ are low and OR is high, data is read from the FIFO on the low-to-high transition of RDCLK.
\overline{RESET}	1	I	Reset. To reset the FIFO, four low-to-high transitions of RDCLK and four low-to-high transitions of WRTCLK must occur while \overline{RESET} is low. This sets HF, IR, and OR low and AF/AE high.
WRTCLK	25	I	Write clock. WRTCLK is a continuous clock and can be asynchronous or coincident to RDCLK. A low-to-high transition of WRTCLK writes data to memory when WRTEN2 is low, WRTEN1 is high, and IR is high. IR is synchronous to the low-to-high transition of WRTCLK.
$\overline{WRTEN1}$ $\overline{WRTEN2}$	27 26	I	Write enables. When WRTEN1 is high, $\overline{WRTEN2}$ is low, and IR is high, data is written to the FIFO on a low-to-high transition of WRTCLK.

LOW-POWER CLOCKED FIRST-IN, FIRST-OUT MEMORY

SCAS593A – OCTOBER 1997 – REVISED APRIL 1998

Define the AF/AE Flag Using the Default Value of X = Y = 32

Figure 3. FIFO Read

offset values for AF/AE

The AF/AE flag has two programmable limits: the almost-empty offset value (X) and the almost-full offset value (Y). They can be programmed after the FIFO is reset and before the first word is written to memory. If the offsets are not programmed, the default values of X = Y = 32 are used. The AF/AE flag is high when the FIFO contains X or fewer words or (256 – Y) or more words.

Program enable (\overline{PEN}) should be held high throughout the reset cycle. \overline{PEN} can be brought low only when IR is high. On the following low-to-high transition of WRTCLK, the binary value on D0–D7 is stored as the almost-empty offset value (X) and the almost-full offset value (Y). Holding \overline{PEN} low for another low-to-high transition of WRTCLK reprograms Y to the binary value on D0–D7 at the time of the second WRTCLK low-to-high transition. When the offsets are being programmed, writes to the FIFO memory are disabled, regardless of the state of the write enables ($\overline{WRTEN1}$, $\overline{WRTEN2}$). A maximum value of 127 can be programmed for either X or Y (see Figure 4). To use the default values of X = Y = 32, \overline{PEN} must be held high.

Figure 4. Programming X and Y Separately

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Supply voltage range, V_{CC}	–0.5 V to 4.6 V
Input voltage range, V_I (see Note 1)	–0.5 V to 4.6 V
Output voltage range, V_O (see Notes 1 and 2)	–0.5 V to $V_{CC} + 0.5$ V
Voltage range applied to a disabled 3-state output	–0.5 V to 3.6 V
Input clamp current, I_{IK} ($V_I < 0$)	–50 mA
Output clamp current, I_{OK} ($V_O < 0$ or $V_O > V_{CC}$)	±50 mA
Continuous output current, I_O ($V_O = 0$ to V_{CC})	±50 mA
Continuous current through V_{CC} or GND	±100 mA
Package thermal impedance, θ_{JA} (see Note 3)	74°C/W
Storage temperature range, T_{stg}	–65°C to 150°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

- NOTES: 1. The input and output voltage ratings can be exceeded if the input and output clamp current ratings are observed.
 2. This value is limited to 4.6 V maximum.
 3. The package thermal impedance is calculated in accordance with JESD 51.

PARAMETER MEASUREMENT INFORMATION

NOTES: A. C_L includes probe and jig capacitance.

B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control.

Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.

C. All input pulses are supplied by generators having the following characteristics: $PRR \leq 10\text{ MHz}$, $Z_O = 50\ \Omega$, $t_r \leq 2.5\text{ ns}$, $t_f \leq 2.5\text{ ns}$.

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
