### FEATURES

mm inch

#### 1. Power PhotoMOS relay with internal varistor

An internal varistor on the output side protects the output MOSFET from the reverse voltage from an external voltage surge or inductive load.

#### 2. High capacity PhotoMOS relay

Supports control of minute loads to a maximum 3.0 A. Suitable for output control.

#### 3. Supports both AC and DC

Bi-directional control so there is no need to differentiate according to the load as in conventional SSR's.

#### 4. Can be placed on-board the 4-unit relay (power photoMOS relay type)

#### 5. Ideal for inductive loads

Ideal for inductive loads such as motors, solenoids, and electro-magnetic contactors.

#### 6. High sensitivity, low ON resistance

Can control a maximum 3.0 A load with a 5 mA input current. Low On resistance of 0.18 Ω (AQZ202V).

#### 7. Compact slim-type 4-pin SIL

(W) 3.5x(L) 21.0x(H) 12.5 mm (W) .138x(L) .827x(H) .492 inch. The compact 73.5mm<sup>2</sup> size of the 4-pin SIL package allows high density mounting.

#### 8. Sockets also available

#### 9. Promoting the CE making (Please inquire for further details.)
