

**THE DATASHEET OF
TLV809L30DBZR**

TLV809

3-Pin Supply Voltage Supervisor

1 Features

- Precision supply voltage monitor: 2.5 V, 3 V, 3.3 V, 5 V
- Power-on reset generator with a fixed delay time of 200 ms
- Supply current: 9 μ A (typical)
- Temperature range: -40°C to $+85^{\circ}\text{C}$
- 3-Pin SOT-23 package
- Pin-for-pin compatible with the MAX809

2 Applications

- [Factory automation](#)
- [Portable and battery-powered equipment](#)
- [Set-top boxes](#)
- [Servers](#)
- [Appliances](#)
- [Electricity meters](#)
- [Building automation](#)

3 Description

The TLV809 family of supervisory circuits provides circuit initialization and timing supervision, primarily for digital signal processors (DSPs) and processor-based systems. The newer [TLV809E](#) device is a pin-to-pin compatible alternative.

During power-on, $\overline{\text{RESET}}$ is asserted when the supply voltage (V_{DD}) becomes greater than 1.1 V. Thereafter, the supervisory circuit monitors V_{DD} and keeps $\overline{\text{RESET}}$ active as long as V_{DD} remains below the threshold voltage, V_{IT} . An internal timer delays the return of the output to the inactive state (high) to ensure proper system reset. The delay time ($t_{\text{d(typ)}} = 200$ ms) starts after V_{DD} rises above the threshold voltage, V_{IT} . When the supply voltage drops below the V_{IT} threshold voltage, the output becomes active (low) again. No external components are required. All devices in this family have a fixed sense-threshold voltage (V_{IT}) set by an internal voltage divider.

This product family is designed for supply voltages of 2.5 V, 3 V, 3.3 V, and 5 V. The circuits are available in a 3-pin SOT-23 package. The TLV809 devices are characterized for operation over a temperature range of -40°C to $+85^{\circ}\text{C}$.

Device Information

4 Revision History

Changes from Revision E (November 2020) to Revision F (December 2020)

Page

- Corrected missed change of VDD from 7 to 6.5 in *Absolute Maximum Ratings* for all other pins and in note2...
5

Changes from Revision D (March 2016) to Revision E (November 2020)

Page

- Updated the numbering format for tables, figures, and cross-references throughout the document..... 1
- Updated the *Description* section..... 1
- Updated *Device Comparison* 4
- Changed VDD from 7 to 6.5 in *Absolute Maximum Ratings* 5
- Changed V_{OL} @ 500 μ A from 0.2 to 0.3 in *Electrical Characteristics* 6
- Changed t_w pulse duration from 3 to 10 μ s in *Timing Requirements* 6
- Changed t_{PHL} from 1 to 10 μ s in *Switching Characteristics* 6
- Deleted figure for Minimum Pulse Duration At V_{DD} in Typical Characteristics..... 8
- Changed figure from Pulse Duration to V_{OL} , I_{OL} in the Typical Application Section..... 11

Changes from Revision C (February 2012) to Revision D (March 2016)

Page

- Added *Device Information* table, *Pin Configuration and Functions* section, *ESD Ratings* table, *Overview* section, *Feature Description* section, *Device Functional Modes* section, *Application and Implementation* section, *Power Supply Recommendations* section, *Layout* section, *Device and Documentation Support* section, and *Mechanical, Packaging, and Orderable Information* section..... 1
- Deleted pinout drawing from page 1 1
- Changed *Description* section: added third paragraph and changed section wording for clarity..... 1
- Deleted soldering temperature parameter from *Absolute Maximum Ratings* table 5
- Changed I_{DD} parameter test conditions in *Electrical Characteristics* table 6

Changes from Revision B (September 2010) to Revision C (February 2012)

Page

- Updated ordering information 4

Changes from Revision A (July 2010) to Revision B (September 2010)	Page
• Updated document format to current standards.....	1
• Added DBZ package to pinout figure.....	1
• Added <i>Thermal Information</i> table.....	5
• Changed Figure 7-3	8

5 Device Comparison

Table 5-1. Device Threshold Options

PRODUCT	THRESHOLD VOLTAGE
TLV809J25	2.25 V
TLV809L30	2.64 V
TLV809K33	2.93 V
TLV809I50	4.55 V

Table 5-2. Device Family Comparison

DEVICE	FUNCTION

Pin Functions

PIN		I/O	DESCRIPTION
NO.	NAME		
1	GND	—	Ground pin. This pin must be connected to ground with a low-impedance connection.
2	RESET	O	$\overline{\text{RESET}}$ pin. $\overline{\text{RESET}}$ is an active low signal, asserting when V_{DD} is below the threshold voltage. When V_{DD} rises above V_{IT} , there is a delay time (t_d) until $\overline{\text{RESET}}$ deasserts. $\overline{\text{RESET}}$ is a push-pull output stage.
3	V_{DD}	I	Supply voltage pin. A 0.1- μF ceramic capacitor from this pin to ground is recommended to improve stability of the threshold voltage.

7 Specifications

7.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

		MIN	MAX	UNIT
V _{DD}	Supply voltage ⁽²⁾		6.5	V
	All other pins ⁽²⁾	-0.3	6.5	
I _{OL}	Maximum low output current		5	mA
I _{OH}	Maximum high output current		-5	mA
I _{IK}	Input clamp current (V _I < 0 or V _I > V _{DD})		±20	mA
I _{OK}	Output clamp current (V _O < 0 or V _O > V _{DD})		±20	mA
T _A	Operating free-air temperature	-40	85	°C
T _{stg}	Storage temperature	-65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values are with respect to GND. For reliable operation, do not operate the device at 6.5 V for more than t = 1000h continuously.

7.2 ESD Ratings

			VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±2000	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±500	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

7.3 Recommended Operating Conditions

at specified temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
V _{DD}	Supply voltage	2		6	V
C _{IN}	V _{DD} bypass capacitor		0.1		µF
T _A	Operating free-air temperature range	-40		85	°C

7.4 Thermal Information

THERMAL METRIC ⁽¹⁾		TLV809		UNIT
		DBV (SOT-23)	DBZ (SOT-23)	
		3 PINS	3 PINS	
R _{θJA}	Junction-to-ambient thermal resistance	242.1	286.9	°C/W
R _{θJC(top)}	Junction-to-case (top) thermal resistance	213.0	105.6	°C/W
R _{θJB}	Junction-to-board thermal resistance	123.4	124.4	°C/W
ψ _{JT}	Junction-to-top characterization parameter	45.7	25.8	°C/W
ψ _{JB}	Junction-to-board characterization parameter	130.9	107.9	°C/W
R _{θJC(bot)}	Junction-to-case (bottom) thermal resistance	—	—	°C/W

- (1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).

7.5 Electrical Characteristics

at $T_A = -40^\circ\text{C}$ to $+85^\circ\text{C}$ (unless otherwise noted); typical values are at $T_A = 25^\circ\text{C}$

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT	
V_{OH}	High-level output voltage	$V_{DD} = 2.5\text{ V to }6\text{ V}, I_{OH} = -500\ \mu\text{A}$	$V_{DD} - 0.2$			V	
		$V_{DD} = 3.3\text{ V}, I_{OH} = -2\text{ mA}$	$V_{DD} - 0.4$				
		$V_{DD} = 6\text{ V}, I_{OH} = -4\text{ mA}$	$V_{DD} - 0.4$				
V_{OL}	Low-level output voltage	$V_{DD} = 2\text{ V to }6\text{ V}, I_{OH} = 500\ \mu\text{A}$	0.3			V	
		$V_{DD} = 3.3\text{ V}, I_{OH} = 2\text{ mA}$	0.4				
		$V_{DD} = 6\text{ V}, I_{OH} = 4\text{ mA}$	0.4				
Power-up reset voltage ⁽¹⁾		$V_{DD} \geq 1.1\text{ V}, I_{OL} = 50\ \mu\text{A}$	0.2			V	
V_{IT-}	Negative-going input threshold voltage ⁽²⁾	$T_A = -40^\circ\text{C to }+85^\circ\text{C}$	TLV809J25	2.20	2.25	2.30	V
			TLV809L30	2.58	2.64	2.70

8 Detailed Description

8.1 Overview

The TLV809 is a 3-pin voltage detector with fixed detection thresholds, an active-low push-pull $\overline{\text{RESET}}$ output, and an internal timer to delay the $\overline{\text{RESET}}$ signal when V_{DD} rises above the threshold voltage.

8.2 Functional Block Diagram

8.3 Feature Description

8.3.1 Supply Voltage Monitoring

The device actively monitors its supply voltage to ensure that the power supply is above a certain voltage threshold.

The device offers various fixed threshold options that are approximately 10% below several standard supply voltages (2.5 V, 3.0 V, 3.3 V, 5.0 V).

8.3.2 $\overline{\text{RESET}}$ Output

The device has a $\overline{\text{RESET}}$ output to indicate the status of the input power supply.

$\overline{\text{RESET}}$ is an active low signal, asserting when V_{DD} is below the threshold voltage. When V_{DD} rises above V_{IT} , there is a delay time (t_d) until $\overline{\text{RESET}}$ deasserts.

$\overline{\text{RESET}}$ is a push-pull output stage.

8.4 Device Functional Modes

When the input supply voltage is in its recommended operating range (2 V to 6 V), the device is in a normal operational mode. In normal operational mode the device monitors V_{DD} for undervoltage detection.

When the input supply is below its recommended operating range, the device is in shutdown mode and therefore tries to assert $\overline{\text{RESET}}$.

9 Application and Implementation

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

9.1 Application Information

9.1.1 V_{DD} Transient Rejection

The device has built-in rejection of fast transients on the V_{DD} pin. The rejection of transients depends on both the duration and the amplitude of the transient. The amplitude of the transient is measured from the bottom of the transient to the negative threshold voltage of the device, as shown in Figure 9-1.

Figure 9-1. Voltage Transient Measurement

The device does not respond to transients that are fast duration and low amplitude or long duration and small amplitude. Transients meeting or longer than the t_w specified in the Section 7.6 section triggers a reset.

9.1.2 Reset During Power-Up and Power-Down

The device output is valid when V_{DD} is greater than 1.1 V. When V_{DD} is less than 1.1 V, the output transistor turns off and becomes high impedance. The voltage on the $\overline{\text{RESET}}$ pin rises to the voltage level connected to the pullup resistor. Figure 9-2 shows a typical waveform for power-up.

Figure 9-2. Power-Up Response

9.2 Typical Application

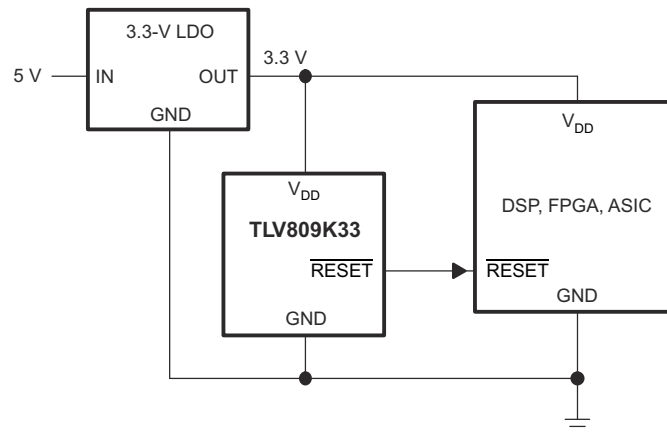

Figure 9-3. Monitoring a 3.3-V Supply

9.2.1 Design Requirements

The device must ensure that the supply voltage does not drop more than 15% below 3.3 V. If the supply voltage falls below 3.3 V – 15%, then the load must be disabled.

9.2.2 Detailed Design Procedure

The TLV809K33 is selected to ensure that V_{DD} is greater than 2.87 V when the load is enabled.

9.2.3 Application Curve

Figure 9-4. Low-Level Output Voltage vs Low-Level Output Current

10 Power Supply Recommendations

Power the device with a low-impedance supply. A 0.1- μF bypass capacitor from V_{DD} to ground is recommended.

11 Layout

11.1 Layout Guidelines

Place the device near the load for the input power supply, with a low-impedance connection to the power supply pins of the load to sense the supply voltage.

11.2 Layout Example

Figure 11-1. Example Layout

12.2 Support Resources

[TI E2E™ support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

12.3 Trademarks

TI E2E™ is a trademark of Texas Instruments.

All trademarks are the property of their respective owners.

12.4 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of ≤ 1000 ppm threshold. Antimony trioxide based flame retardants must also meet the ≤ 1000 ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

DBZ0003A

PACKAGE OUTLINE

SOT-23 - 1.12 mm max height

SMALL OUTLINE TRANSISTOR

4214838/D 03/2023

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Reference JEDEC registration TO-236, except minimum foot length.
4. Support pin may differ or may not be present.

EXAMPLE BOARD LAYOUT

DBZ0003A

SOT-23 - 1.12 mm max height

SMALL OUTLINE TRANSISTOR

LAND PATTERN EXAMPLE
SCALE:15X

SOLDER MASK DETAILS

4214838/D 03/2023

NOTES: (continued)

4. Publication IPC-7351 may have alternate designs.
5. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

EXAMPLE STENCIL DESIGN

DBZ0003A

SOT-23 - 1.12 mm max height

SMALL OUTLINE TRANSISTOR

SOLDER PASTE EXAMPLE
BASED ON 0.125 THICK STENCIL
SCALE:15X

4214838/D 03/2023

NOTES: (continued)

6. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
7. Board assembly site may have different recommendations for stencil design.

DBV0003A

PACKAGE OUTLINE

SOT-23 - 1.45 mm max height

SMALL OUTLINE TRANSISTOR

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Reference JEDEC MO-178.
4. Body dimensions do not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.25 mm per side.
5. Support pin may differ or may not be present.

EXAMPLE BOARD LAYOUT

DBV0003A

SOT-23 - 1.45 mm max height

SMALL OUTLINE TRANSISTOR

LAND PATTERN EXAMPLE
EXPOSED METAL SHOWN
SCALE:15X

SOLDER MASK DETAILS

4220743/B 03/2023

NOTES: (continued)

- 6. Publication IPC-7351 may have alternate designs.
- 7. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

EXAMPLE STENCIL DESIGN

DBV0003A

SOT-23 - 1.45 mm max height

SMALL OUTLINE TRANSISTOR

SOLDER PASTE EXAMPLE
BASED ON 0.125 mm THICK STENCIL
SCALE:15X

4220743/B 03/2023

NOTES: (continued)

8. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
9. Board assembly site may have different recommendations for stencil design.

IMPORTANT NOTICE AND DISCLAIMER
