AP2820AMMTR-G1**

**High-side Power Distribution Switch with Enable and Flag**

**AP2820**

**General Description**

The AP2820 is an integrated high-side power switch that consists of N-Channel MOSFET, charge pump, over current & temperature and other related protection circuits. The switch's low  $R_{DS(ON)}$ , 60m $\Omega$ , is designed to meet USB voltage drop requirements. The IC includes soft-start to limit inrush current, over-current protection, load short protection with fold-back, and thermal shutdown to avoid switch failure during hot plug-in. Under voltage lockout (UVLO) function is used to ensure the device remain off unless there is a valid input voltage present. A FLAG output is available to indicate fault conditions to the local USB controller.

The AP2820 is available in standard packages of SOIC-8 and MSOP-8.
