

**THE DATASHEET OF
MAX14618ETA+T**

MAX14600–MAX14605/ MAX14618

USB Host Charger Identification/ Adapter Emulators

General Description

The MAX14600–MAX14605 and MAX14618 are third-generation USB 2.0 host charger identification devices that combine USB Hi-Speed analog switches with a USB adapter emulator circuit.

The MAX14600–MAX14605 and MAX14618 support passthrough mode and auto mode. In charging downstream port (CDP) pass-through mode, the devices emulate the CDP function while supporting normal USB traffic. The MAX14600/MAX14603/MAX14605 have a pFET open-drain output (CEN), and the MAX14601/MAX14604/MAX14618 have an nFET open-drain output (CEN) to restart the peripheral connected to the USB host.

All the devices support the CDP and standard downstream port (SDP) charging during the active state (S0) and support the dedicated charging port (DCP) charging during the standby state (S3/S4/S5). The MAX14603/MAX14604/MAX14605/MAX14618 support remote wakeup in standby mode. The MAX14602/MAX14605 offer backward-compatible CDP emulation upgrade to the MAX14566E.

The MAX14600–MAX14605/MAX14618 are available in an 8-pin (2mm x 2mm) TDFN package, and are specified over the -40°C to +85°C extended temperature range.

Ordering Information/Selector Guide appears at end of data sheet.

Benefits and Features

- Improved Charger Interoperability
 - USB CDP Emulation in S0 State
 - Meets New USB Battery Charging (BC) Revision 1.2 Specification
 - Backward-Compatible with Previous USB BC Revisions
 - Meets China YD/T1591-2009 Charging Specification
 - Supports Standby Mode Charging for Apple and BC Revision 1.2-Compatible Devices
- Greater User Flexibility
 - CB0 and CB1 Pins Control Multiple Automatic and Manual Charger States
- High Level of Integrated Features
 - Supports Remote Wake-Up (MAX14603/MAX14604/MAX14605/MAX14618)
 - Low-Capacitance USB 2.0 Hi-Speed Switch to Change Charging Modes
 - Automatic Current-Limit Switch Control
- Save Space on Board
 - 2mm x 2mm, 8-Pin TDFN Package

Applications

- USB Host Data/Chargers including:
 - Laptop and Desktop Computers
 - USB Hubs
 - Flat-Panel Displays with USB
 - Media Players
 - Game Consoles

Typical Operating Circuit

Absolute Maximum Ratings

All voltages referenced to GND.
 V_{CC} , TDP, TDM, CB0, CB1, DP, DM, \overline{CEN} , CEN -0.3V to +6.0V
 Continuous Current into Any Terminal..... $\pm 30\text{mA}$
 Continuous Power Dissipation ($T_A = +70^\circ\text{C}$)
 TDFN (derate 11.9mW/ $^\circ\text{C}$ above $+70^\circ\text{C}$).....953.5mW

Operating Temperature Range..... -40°C to $+85^\circ\text{C}$
 Junction Temperature..... $+150^\circ\text{C}$
 Storage Temperature Range..... -65°C to $+150^\circ\text{C}$
 Lead Temperature (soldering, 10s)..... $+300^\circ\text{C}$
 Soldering Temperature (reflow)..... $+260^\circ\text{C}$

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Package Thermal Characteristics (Note 1)

TDFN

Junction-to-Ambient Thermal Resistance (θ_{JA}) 84°C/W
 Junction-to-Case Thermal Resistance (θ_{JC}) 37°C/W

Note 1: Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a four-layer board. For detailed information on package thermal considerations, refer to www.maximintegrated.com/thermal-tutorial.

Electrical Characteristics

($V_{CC} = 3.0\text{V}$ to 5.5V , $T_A = T_{MIN}$ to T_{MAX} , unless otherwise noted. Typical values are at $V_{CC} = 5.0\text{V}$, $T_A = +25^\circ\text{C}$.) (Note 2)

Electrical Characteristics (continued)

(V_{CC} = 3.0V to 5.5V, T_A = T_{MIN} to T_{MAX}, unless otherwise noted. Typical values are at V_{CC} = 5.0V, T_A = +25°C.) (Note 2)

| PARAMETER | SYMBOL | CONDITIONS | MIN | TYP | MAX | UNITS |
|--------------------------------|------------------|-----------------------------------------------------------------------------------------------------------------------|-----------------------|-----|-----|-------|
| LOGIC INPUTS (CB0, CB1) | | | | | | |
| CB0/CB1 Input Logic-High | V _{IH} | | 1.4 | | | V |
| CB0/CB1 Input Logic-Low | V _{IL} | | | | 0.4 | V |
| CB0/CB1 Input Leakage Current | I _{IN} | V _{CC} = 5.5V, 0V ≤ V _{IN} ≤ V _{IL} or V _{IH} ≤ V _{IN} ≤ V _{CC} | -1 | | +1 | μA |
| CEN/CEN OUTPUTS | | | | | | |
| V _{BUS} Toggle Time | t _{VBT} | CB0 = V _{IL} to V _{IH} or V _{IH} to V _{IL} | 1 | 2 | 3 | s |
| CEN Output Logic-High Voltage | | CB0 = V _{IL} to V _{IH} , I _{SOURCE} = 2mA | V _{CC} - 0.4 | | | V |
| CEN Output Leakage Current | | V _{CC} = 5.5V, V _{CEN} = 0V, CEN deasserted | | | 1 | μA |
| CEN Output Logic-Low Voltage | | CB0 = V _{IL} to V _{IH} , I _{SINK} = 2mA | | | 0.4 | V |
| CEN Output Leakage Current | | V _{CC} = V _{CEN} = 5.5V, CEN deasserted | | | 1 | μA |
| ESD PROTECTION | | | | | | |
| ESD Protection Level | V _{ESD} | HBM | | ±2 | | kV |

Note 2: All units are 100% production tested at T_A = +25°C. Specifications over temperature are guaranteed by design.

Note 3: The device is operational from 3.0V to 5.5V. However, to have the valid Apple resistor-divider network, the V_{CC} supply must stay within 4.75V to 5.25V.

Note 4: Guaranteed by design.

Note 5: Does not include the delay by the state machine.

Note 6: For BC1.2 CDP compliance, V_{CC,MIN} = 4.75V, V_{CC,MAX} = 5.25V.

Pin Configurations

Pin Descriptions

| PIN | | | NAME | FUNCTION |
|-----------------------|------------------------------------|-----------------------|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MAX14600/ MAX14603 | MAX14601/ MAX14604/ MAX14618 | MAX14602/ MAX14605 | | |
| 1 | — | 1 | $\overline{\text{CEN}}$ | Active-Low pMOSFET Open-Drain Output, Current-Limit Switch (CLS) Control Output. When CB0 changes from V_{IL} to V_{IH} or V_{IH} to V_{IL} , $\overline{\text{CEN}}$ is high. |
| — | 1 | — | CEN | nMOSFET Open-Drain Output, CLS Control Output. When CB0 changes from V_{IL} to V_{IH} or from V_{IH} to V_{IL} , CEN is low. |
| 2 | 2 | 2 | DM | USB Connector D- Connection |
| 3 | 3 | 3 | DP | USB Connector D+ Connection |
| 4 | 4 | — | CB1 | Switch Control Bit. See Table 1. |
| — | — | 4 | I.C. | Internally Connected. Do not externally connect. |
| 5 | 5 | 5 | V_{CC} | Power Supply. Connect a 0.1 μF capacitor between V_{CC} and ground as close as possible to the device. |
| 6 | 6 | 6 | TDP | Host USB Transceiver D+ Connection |
| 7 | 7 | 7 | TDM | Host USB Transceiver D- Connection |
| 8 | 8 | 8 | CB0 | Switch Control Bit. See Table 1. |
| — | — | — | EP | Exposed Pad. Connect EP to ground. For enhanced thermal dissipation, connect EP to a copper area as large as possible. |

Functional Diagram

Detailed Description

The MAX14600–MAX14605 and MAX14618 adapter emulator family has Hi-Speed USB analog switches that support USB hosts to identify the USB port as a charger port when the USB host is in a low-power mode and cannot enumerate USB devices. These Hi-Speed USB switches feature low 4pF (typ) on-capacitance and low 3.5Ω (typ) on-resistance. DP and DM can handle signals between 0V and 6V with any supply voltage.

Resistor-Dividers

The MAX14600–MAX14605/MAX14618 family features an internal resistor-divider for biasing data lines to provide support for Apple-compliant devices. When the MAX14600–MAX14605/MAX14618 family is not operated with the resistor-divider, the device disconnects the resistor-dividers from the supply voltage to minimize supply current requirements. The resistor-dividers are not connected in pass-through mode.

Switch Control

The MAX14600–MAX14605/MAX14618 family features dual digital inputs, CB0 and CB1, for mode selection.

For the MAX14600/MAX14601/MAX14603/MAX14604, connect CB0 and CB1 to a logic-level low voltage for autodetection charger mode (AM). Change only CB1 to a logic-level high for forced dedicated charger mode (FM). Change only CB1 to a logic-level low for normal high-speed pass-through mode (PM). Connect CB0 and CB1 to a logic-level high for high-speed pass-through mode with CDP emulation (CM). See [Table 1](#).

For the MAX14618, connect CB0 to a logic-level low voltage for autodetection charger mode (AM). Change CB0 to a logic-level high voltage and CB1 to a logic-level low voltage to place the MAX14618 in normal high-speed pass-through charger mode (PM). Connect CB0 and CB1 to a logic-level high for high-speed pass-through mode with CDP emulation (CM). See [Table 2](#).

Table 1. Digital Input State for MAX14600/MAX14601/MAX14603/MAX14604

| CB0 | CB1 | CHARGER/USB | MODE | STATUS |
|-----|-----|-------------|------|---------------------------------------------------------------------------------------------------|
| 0 | 0 | Charger | AM | Autodetection Charger Mode |
| 0 | 1 | Charger | FM | Force Dedicated Charger Mode: DP/DM shorted. |
| 1 | 0 | USB | PM | USB Pass-Through Mode: DP/DM connected to TDP/TDM. |
| 1 | 1 | USB | CM | USB Pass-Through Mode with CDP Emulation: Auto connects DP/DM to TDP/TDM depending on CDP status. |

Table 2. Digital Input State for MAX14618

| CB0 | CB1 | CHARGER/USB | MODE | STATUS |
|-----|-----|-------------|------|---------------------------------------------------------------------------------------------------|
| 0 | X | Charger | AM | Auto detection Charger Mode with Remote Wake-Up |
| 1 | 0 | USB | PM | USB Pass-Through Mode: DP/DM connected to TDP/TDM. |
| 1 | 1 | USB | CM | USB Pass-Through Mode with CDP Emulation: Auto connects DP/DM to TDP/TDM depending on CDP status. |

Table 3. Digital Input State for MAX14602/MAX14605

| CB0 | CHARGER/USB | MODE | STATUS |
|-----|-------------|------|---------------------------------------------------------------------------------------------------|
| 0 | Charger | AM | Autodetection Charger Mode |
| 1 | USB | CM | USB Pass-Through Mode with CDP Emulation: Auto connects DP/DM to TDP/TDM depending on CDP status. |

In CDP emulation mode, the peripheral device with CDP detection capability draws the charging current up to 1.5A immediately without USB enumeration. The MAX14602/MAX14605 have CB0 digital input control only (Table 3). The MAX14602/MAX14605 are pin-to-pin compatible with the MAX14566E, and CB0 and CB1 are connected together internally, which makes these devices easy upgrades for CDP emulation.

Autodetection

The MAX14600–MAX14605/MAX14618 family features autodetection charger mode for dedicated chargers and USB masters. Both CB0 and CB1 must be set low to activate autodetection charger mode.

In autodetection charger mode, the device monitors the voltages at DM and DP to determine the type of device attached. If the voltage at DM is 2.05V (typ) or higher and the voltage at DP is 2.3V (typ) or lower, the voltage stays unchanged. If the voltage at DM is forced below the 2.05V (typ) threshold, the internal switch disconnects DM and

DP from the resistor-divider and DP and DM are shorted together for dedicated charging mode.

Also, if the voltage at DP is forced higher than the 2.3V (typ) threshold, the internal switch disconnects DM and DP from the resistor-divider and DP and DM are shorted together for dedicated charging mode.

Once the charging voltage is removed, the short between DP and DM is disconnected for normal operation.

Auto-Peripheral Reset

The MAX14600–MAX14605/MAX14618 family features an auto current-limit switch-control output. This feature resets the peripheral connected to V_{BUS} in the event the USB host switches to or from standby mode. CEN or CEN provide a 2s (typ) pulse on the rising or falling-edge of CB0 (Figure 4 and Figure 5.) With the MAX14603/ MAX14604/MAX14605/MAX14618, the auto-peripheral reset is suspended in case of CB0 and CB1 transition from 11 to 00 as long as the peripheral remains connected. See the [Remote Wake-Up Support](#) section for more information.

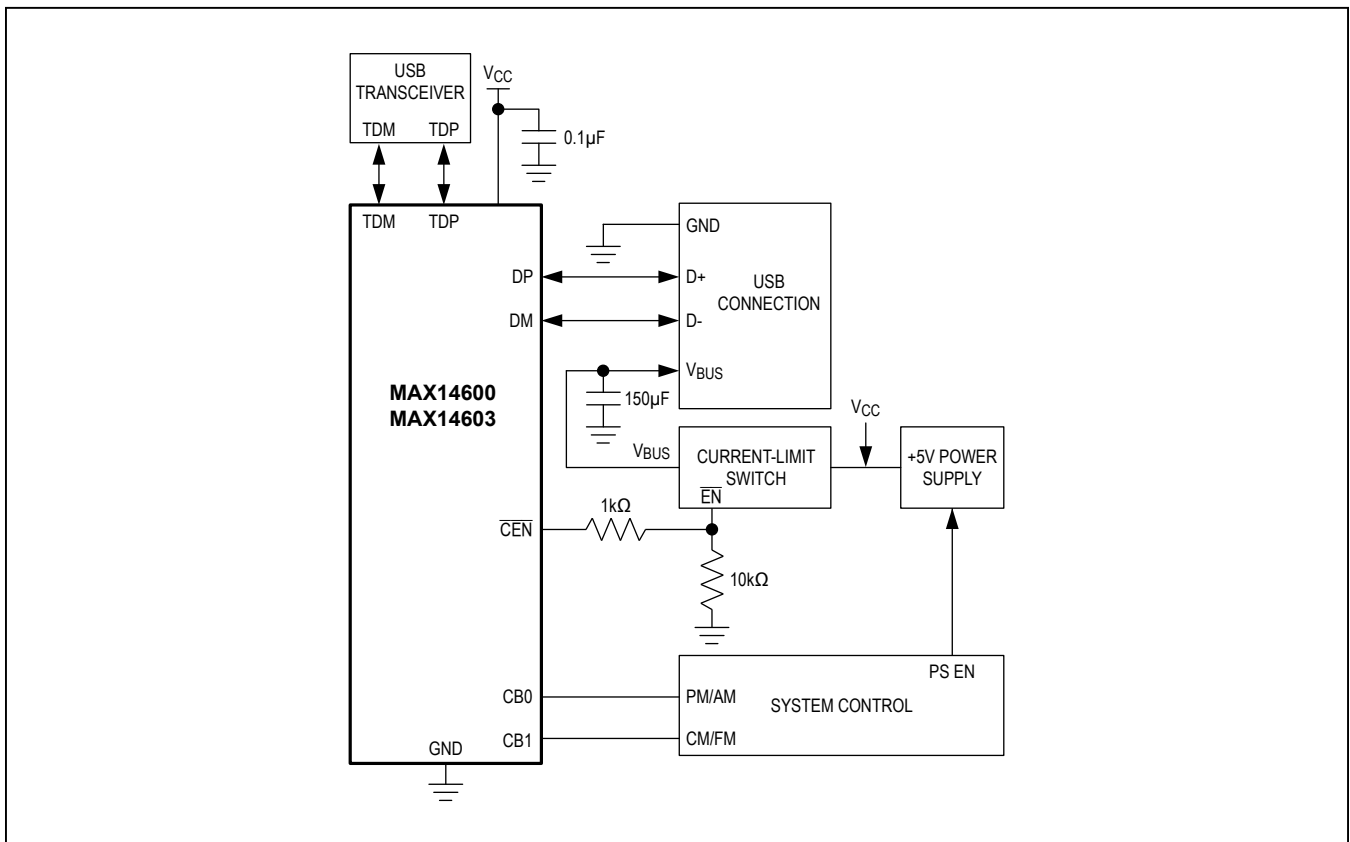

Figure 4. MAX14600/MAX14603 Peripheral Reset Applications Diagram

Figure 5. MAX14601/MAX14604/MAX14618 Peripheral Reset Applications Diagram

Table 4. Different Power States

| STATE | DESCRIPTION |
|-------|------------------------------------------------------------------------------------------------------------------|
| S0 | System on. |
| S1 | Power to the CPU(s) and RAM is maintained; devices that do not indicate they must remain on can be powered down. |
| S2 | CPU is powered off. |
| S3 | Standby (suspend to RAM). System memory context is maintained, and all other system context is lost. |
| S4 | Hibernate. Platform context is maintained. |
| S5 | Soft off. |

USB Pass-Through Mode with CDP Emulation

The MAX14600–MAX14605/MAX14618 family features a pass-through mode with CDP emulation. This is to support the higher charging current capability during the pass-through mode in normal USB operation (S0 state). The peripheral device equipped with CDP detection capability could draw a charging current as defined in USB Battery Charger Specification 1.2 when the charging host supports the CDP mode. This is a useful feature since most host USB transceivers do not have the CDP function. [Table 4](#) shows the different power states of S0–S5.

Bus Voltage Discharge

The MAX14601/MAX14604/MAX14618 auto current-limit switch-control output can be used to discharge the V_{BUS} during V_{BUS} reset. When the system controls the current limit switch for V_{BUS} toggle, the output capacitor can be discharged slowly depending upon the load. If fast discharge of the V_{BUS} is desired, the CEN output can be used to discharge the V_{BUS} (Figure 6.)

Data Contact Detect Support

The MAX14600–MAX14605/MAX14618 family support USB devices that require detecting the USB data lines prior to charging. When a USB Revision 1.2-compliant device is attached, the USB data lines DP and DM are shorted together. The short remains until it is detected by the USB device. This feature guarantees appropriate charger detection if a USB Revision 1.2-compliant device is attached. The autodetection charger mode is activated after the data contact detect is established. CB0 and CB1 must be set low to activate data contact detect support.

Remote Wake-Up Support

The MAX14603/MAX14604/MAX14605/MAX14618 feature remote wake-up if pass-through mode with CDP emulation is used prior to transitioning to auto mode in standby state (S3). If the peripheral device is connected and remains in the USB port during S0 state, the MAX14603/MAX14604/MAX14605/MAX14618 maintain the pass-through mode until it is removed. If this feature is not needed, such as in battery-powered mode, the embedded control could cancel the remote wake-up by toggling the V_{BUS} as it moves into the standby state.

Backward Compatibility

The MAX14602/MAX14605 offer easy backward-compatible CDP emulation upgrade to the MAX14566E.

ESD Test Conditions

ESD performance depends on a variety of conditions. Contact Maxim for a reliability report that documents test methodology and results.

Figure 6. MAX14601/MAX14604/MAX14618 V_{BUS} Discharge Circuit

**Extended ESD Protection
(Human Body Model)**

ESD-protection structures are incorporated on all pins to protect against electrostatic discharges up to $\pm 2\text{kV}$

(Human Body Model) encountered during handling and assembly. The ESD structures withstand high ESD both in normal operation and when the device is powered down. After an ESD event, the device continues to function without latchup (Figure 7a and Figure 7b).

Package Information

For the latest package outline information and land patterns (footprints), go to www.maximintegrated.com/packages. Note that a “+”, “#”, or “-” in the package code indicates RoHS status only. Package drawings may show a different suffix character, but the drawing pertains to the package regardless of RoHS status.

| PACKAGE TYPE | PACKAGE CODE | OUTLINE NO. | LAND PATTERN NO. |
|--------------|--------------|-------------|------------------|
| 8 TDFN-EP | T822+2 | 21-0168 | 90-0065 |

Revision History

| REVISION NUMBER | REVISION DATE | DESCRIPTION | PAGES CHANGED |
|-----------------|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------|
| 0 | 6/11 | Initial release | — |
| 1 | 9/11 | Added MAX14618 to data sheet; corrected Conditions on V_{DM_SRC} Voltage in the <i>Electrical Characteristics</i> ; corrected x-scale labels on TOC5 in the <i>Typical Operating Characteristics</i> | 1–7, 9, 11–15 |
| 2 | 10/11 | Corrected package code and land pattern number in the <i>Package Information</i> | 15 |
| 3 | 5/12 | Relabeled TOC 10 | 9 |
| 4 | 2/16 | Added Note 6 to <i>Electrical Characteristics</i> table | 2, 3 |

For pricing, delivery, and ordering information, please contact Maxim Direct at 1-888-629-4642, or visit Maxim Integrated's website at www.maximintegrated.com.

Maxim Integrated cannot assume responsibility for use of any circuitry other than circuitry entirely embodied in a Maxim Integrated product. No circuit patent licenses are implied. Maxim Integrated reserves the right to change the circuitry and specifications without notice at any time. The parametric values (min and max limits) shown in the *Electrical Characteristics* table are guaranteed. Other parametric values quoted in this data sheet are provided for guidance.
