

**THE DATASHEET OF  
LTC2802IDE#PBF**

## FEATURES

- **1.8V to 5.5V Supply Voltage**
- **Single and Dual Transceivers**
- **High-Speed Operation**
  - 1Mbps for 250pF/3kΩ Load (LTC2802, LTC2804)**
  - 250kbps for 1nF/3kΩ Load**
  - 100kbps for 2.5nF/3kΩ TIA/EIA-232-F Load**
- **Low-Power 1μA Shutdown and 15μA Receivers-Active Modes**
- **No Damage or Latchup to ±10kV ESD on RS-232 Interface**
- **Logic Supply Pin for Easy Level-Shifting to UART or Microprocessor**
- **Low-Latency Output Enable Allows Line Sharing and Half-Duplex Operation**
- **True RS-232 Compliant Output Levels**
- **Small Footprint:**
  - LTC2801/LTC2802 4mm × 3mm DFN Package
  - LTC2803/LTC2804 Narrow SSOP-16 and 5mm × 3mm DFN Packages

## APPLICATIONS

- **Battery-Powered Systems**
- **Computers and Consumer Electronics**
- **Diagnostic Ports**

## DESCRIPTION

The LTC<sup>®</sup>2801/LTC2802/LTC2803/LTC2804 are single and dual RS-232 transceivers in narrow SSOP and chip-scale DFN packages. All operate over a supply range of 1.8V to 5.5V, which permits operation directly from two alkaline, NiCd or NiMH cells. An integrated DC-to-DC converter generates power supplies for driving RS-232 levels. A logic supply pin allows easy interfacing with different logic levels independent of the DC-DC supply.

These parts are compatible with the TIA/EIA-232-F standard. Driver outputs are protected from overload and can be shorted to ground or up to ±15V without damage. To extend battery life, receivers can be kept active, operating at reduced speed, with only 15μA current. In shutdown mode, current is further reduced to 1μA.

## PRODUCT SELECTION GUIDE

PART NUMBER	DRIVERS AND RECEIVERS	MAXIMUM DATA RATE	MODES*	PACKAGE
LTC2801	1 + 1	0.25Mbps	SD, RA, DD, AO	DFN-12
LTC2802	1 + 1	1Mbps	SD, RA, DD, AO	DFN-12
LTC2803	2 + 2	0.25Mbps	SD, RA, DD, AO	DFN-16
LTC2803-1	2 + 2	0.25Mbps	SD, AO	SSOP-16
LTC2804	2 + 2	1Mbps	SD, RA, DD, AO	DFN-16
LTC2804-1	2 + 2	1Mbps	SD, AO	SSOP-16

\*SD = Shutdown, RA = Receiver Active (low power), DD = Drivers Disabled, AO = All On

## TYPICAL APPLICATION

**LTC2802 at 1.8V and 1Mbps**

# LTC2801/LTC2802/ LTC2803/LTC2804

## ABSOLUTE MAXIMUM RATINGS (Note 1)

### Input Supplies

$V_{CC}$  ..... -0.3V to 7V  
 $V_L$  ..... -0.3V to 6.7V

### Generated Supplies

$V_{DD}$  .....  $V_{CC}$  - 0.3V to 7.5V  
 $V_{EE}$  ..... 0.3V to -7.5V  
 $V_{DD} - V_{EE}$  ..... 14V

SW ..... -0.3V to  $V_{DD} + 0.3V$

CAP ..... +0.3V to  $V_{EE} - 0.3V$

TIN, T1IN, T2IN, MODE ..... -0.3V to 7V

PS, ON/OFF ..... -0.3V to ( $V_L + 0.3V$ )

RIN, R1IN, R2IN ..... -25V to 25V

TOUT, T1OUT, T2OUT ..... -15V to 15V

ROUT, R1OUT, R2OUT ..... -0.3V to ( $V_L + 0.3V$ )

### Operating Temperature

LTC280XC ..... 0°C to 70°C

LTC280XI ..... -40°C to 85°C

Storage Temperature Range ..... -65°C to 125°C

Lead Temperature (Soldering, 10 sec)

GN Package ..... 300°C

## PIN FUNCTIONS

PIN NAME	PIN NUMBER			COMMENTS
	2801 2802	2803 2804	2803-1 2804-1	
V <sub>CC</sub>	3	5	5	Input Supply (1.8V-5.5V). Bypass to GND with a 1μF capacitor.
V <sub>DD</sub>	4	6	6	Generated Positive Supply Voltage for RS-232 Driver (7V). Connect a 1μF capacitor between V <sub>DD</sub> and GND.
V <sub>EE</sub>	13*	17*	9	Generated Negative Supply Voltage for RS-232 Driver (–6.3V). Connect a 1μF capacitor between V <sub>EE</sub> and GND.
SW	5	7	7	Switch Pin. Connect a 10μH inductor between SW and V <sub>CC</sub> .
GND	6	8	8	Ground.
CAP	7	9	10	Charge Pump Capacitor for Generated Negative Supply Voltage. Connect a 220nF capacitor between CAP and SW.
V <sub>L</sub>	10	12	12	Logic Supply (1.8V-5.5V) for the receiver outputs, driver inputs, and control inputs. This pin should be bypassed to GND with a 220nF capacitor if it's not tied to V <sub>CC</sub> .
TIN (T1IN, T2IN)	11	14, 13	14, 13	Driver Input(s), referenced to V <sub>L</sub> .
TOUT (T1OUT, T2OUT)	2	3, 4	3, 4	RS-232 Driver Output(s).
RIN (R1IN, R2IN)	1	1, 2	1, 2	RS-232 Receiver Input(s). Includes internal 5kΩ termination resistor(s).
ROUT (R1OUT, R2OUT)	12	16, 15	16, 15	Receiver Output(s), referenced to V <sub>L</sub> . Output is short-circuit protected to GND/V <sub>CC</sub> /V <sub>L</sub> , and is high impedance in Shutdown mode, allowing data line sharing.
PS	8	10	—	Power Supply control pin, referenced to V <sub>L</sub> . Enables the integrated DC-DC converter.
MODE	9	11	—	Mode control pin, referenced to V <sub>L</sub> . See Table 1 for functionality.
ON/ $\overline{\text{OFF}}$	—	—	11	Transceiver enable pin, referenced to V <sub>L</sub> . A logic low puts the device in Shutdown mode and places both driver and receiver outputs in a high impedance state.

## BLOCK DIAGRAM

## APPLICATIONS INFORMATION

### Overview

The LTC2801 family of RS-232 transceivers operates on a  $V_{CC}$  supply of 1.8V to 5.5V, utilizing a switching regulator to generate the necessary higher voltage rails for the drivers. The transceivers interface with logic operating on any supply from 1.8V to 5.5V, independent of the  $V_{CC}$  voltage. Depending on the device, one or two control pins are available to invoke Shutdown, Receiver Active and Driver Disable features.

### DC-DC Converter

The on-chip DC-DC converter operates from the  $V_{CC}$  input, generating a 7V  $V_{DD}$  supply and a charge pumped  $-6.3V$   $V_{EE}$  supply, as shown in Figure 6.  $V_{DD}$  and  $V_{EE}$  power the output stage of the drivers and are regulated to levels that guarantee greater than  $\pm 5V$  output swing. The DC-DC converter requires a  $10\mu H$  inductor ( $L1$ ) and a bypass capacitor ( $C4$ ) of at least  $1\mu F$ . The recommended size for the charge pump capacitor ( $C1$ ) is  $220nF$  and for the storage capacitors ( $C2$  and  $C3$ ) is  $1\mu F$ . Larger storage capacitors up to  $4.7\mu F$  may be used if  $C1$  is kept at 20% to 50% their size and  $C4$  is also scaled. Locate  $C1$ - $C4$  close to their associated pins.

Figure 6. DC/DC Converter and Recommended Bypassing

### $V_L$ Logic Supply

A separate logic supply pin  $V_L$  allows the LTC2801 family to interface with any logic signal from 1.8V to 5.5V, as shown in Figure 7. Simply connect the desired logic supply to  $V_L$ . There is no interdependency between  $V_{CC}$  and  $V_L$ ; they may simultaneously operate at any voltage from 1.8V to 5.5V and sequence in any order. If  $V_L$  is powered separately from  $V_{CC}$ , bypass  $V_L$  with a  $220nF$  capacitor ( $C5$ ).

Figure 7.  $V_{CC}$  and  $V_L$  Are Independent

### Power-Saving Modes

When the DC-DC converter and drivers are turned off (PS and MODE or ON/OFF = logic low),  $V_{CC}$  supply current is reduced to  $1\mu A$ . Tables 1 and 2 summarize the modes for each device.

In Shutdown mode,  $V_L$  supply current is reduced to  $1\mu A$ , and both receiver and driver outputs assume a high impedance state.

In Receivers Active mode, the quiescent  $V_L$  supply current is reduced to  $15\mu A$  and the driver outputs assume a high impedance state. The receivers operate at a reduced rate (typically 100 kbps) with hysteresis turned off.

### Half-Duplex Operation

When the DC-DC converter is kept on (PS = logic high), MODE serves as a low-latency driver enable for half-duplex operation. Each driver is enabled and disabled in less than  $2\mu s$ , while each receiver remains continuously active. This mode of operation is illustrated in Figures 15-17.

### Battery Operation

To maximize battery life, connect  $V_{CC}$  (and  $L1$ ) directly to the unregulated battery voltage and  $V_L$  to the regulated supply, as shown in Figure 22. This configuration typically minimizes conversion loss while providing compatibility with system logic levels.

### Inductor Selection

A  $10\mu H$  inductor with a saturation current ( $I_{SAT}$ ) rating of at least 200mA and low DCR (copper wire resistance) is recommended. Some small inductors meeting these requirements are listed in Table 3.

## APPLICATIONS INFORMATION

**Table 3. Recommended Inductors**

PART NUMBER	I <sub>SAT</sub> (mA)	MAX DCR (Ω)	SIZE (mm)	MANUFACTURER
LQH2MCN100K02L	225	1.2	2 × 1.6 × 0.95	Murata www.murata.com
LBC2016T100K	245	0.85	2 × 1.6 × 1.6	Taiyo Yuden www.t-yuden.com
FSLB2520-100K	220	1.1	2.5 × 2 × 1.6	Toko www.tokoam.com

### Capacitor Selection

The small size of ceramic capacitors makes them ideal for the LTC2801 family. X5R and X7R (preferred) types are recommended because their ESR is low and they retain their capacitance over relatively wide voltage and temperature ranges. Use a voltage rating of at least 10V.

### Inrush Current and Supply Overshoot Precaution

In certain applications, such as battery-operated and wall-adaptor devices, fast supply slew rates are generated when power is connected. If V<sub>CC</sub>'s voltage is greater than 4.5V and its rise time is faster than 10μs, the pins V<sub>DD</sub> and SW can exceed their ABS MAX values during start-up. When supply voltage is applied to V<sub>CC</sub>, the voltage difference between V<sub>CC</sub> and V<sub>DD</sub> generates inrush current

**Figure 8. Supply Overshoot Protection for Input Supplies of 4.5V or Higher**

flowing through inductor L1 and capacitors C1, C2. The peak inrush current must not exceed 2A. To avoid this condition, add a 1Ω resistor as shown in Figure 8. This precaution is not relevant for supply voltages below 4.5V or rise times longer than 10μs.

### Board Layout

The board layout should minimize the length and area of the SW and CAP traces. Suggested compact layouts for the LTC2801 family are shown in Figure 9 (a) and (b).

**Figure 9. Recommended Board Layouts for (a) Single and (b) Dual Transceiver Parts**

## PACKAGE DESCRIPTION

**GN Package**  
**16-Lead Plastic SSOP (Narrow .150 Inch)**  
(Reference LTC DWG # 05-08-1641)

**NOTE:**

1. CONTROLLING DIMENSION: INCHES
2. DIMENSIONS ARE IN  $\frac{\text{INCHES}}{\text{MILLIMETERS}}$
3. DRAWING NOT TO SCALE

\*DIMENSION DOES NOT INCLUDE MOLD FLASH. MOLD FLASH SHALL NOT EXCEED 0.006" (0.152mm) PER SIDE

\*\*DIMENSION DOES NOT INCLUDE INTERLEAD FLASH. INTERLEAD FLASH SHALL NOT EXCEED 0.010" (0.254mm) PER SIDE

**REVISION HISTORY** (Revision history begins at Rev E)

REV	DATE	DESCRIPTION	PAGE NUMBER
E	5/10	Replaced Product Selection Guide	1
		Labeled packages with appropriate part numbers in Pin Configuration section	2
		Changed title of Table 1 in Mode Control section	8
		Updated Feature Summary section	9
		Revised first sentence of Power Saving Modes section	10

# LTC2801/LTC2802/ LTC2803/LTC2804

## TYPICAL APPLICATION
