DESCRIPTION

The LTC®7545A is a 12-bit multiplying digital-to-analog converter (DAC) with a microprocessor compatible parallel input. It is a superior pin compatible replacement for the industry standard AD7545A and AD7545. Improvements include better accuracy, better stability over temperature and supply variations and lower sensitivity to output amplifier offset.

This very versatile DAC is useful for 2-quadrant and 4-quadrant multiplying, programmable gain and filtering and single supply noninverting voltage output operation.

Parts are available in 20-pin PDIP and SO packages and commercial and industrial temperature grades.

The ● denotes specificatons which apply over the full operating temperature range.

Note 1: ±0.5LSB = ±0.012% of full scale.

Note 2: Using internal feedback resistor.

Note 3: Guaranteed by design, not subject to test.

Note 4: I_{OUT1} with DAC register loaded to all 0s.

Note 5: Typical temperature coefficient is 100ppm/°C.

Note 6: OUT1 load = 100Ω in parallel with 13pF.

Note 7: To 0.01% for a full-scale change, measured from the falling edge of $\overline{WR}$, $\overline{CS}$ = 0V.

Note 8: From digital input change to 90% of final analog output.

Note 9: V_{REF} = 0V. DAC register contents changed from all 0s to all 1s or all 1s to all 0s.
