

THE DATASHEET OF PS320CUAEX

Precision, Dual-Supply Analog Switches

Features

- Low On-Resistance (17ohms typ.) Minimizes Distortion and Error Voltages
- Low Glitching Reduces Step Errors in Sample-and-Holds
- Split-Supply Operation ($\pm 3V$ to $\pm 8V$)
- Improved Second Sources for MAX320/MAX321/MAX322
- On-Resistance Matching Between Channels, 0.2ohm typ.
- On-Resistance Flatness, $<2\text{ohm typ.}$
- Low Off-Channel Leakage, $<5\text{nA @ } +85^\circ\text{C}$
- TTL/CMOS Logic Compatible
- Fast Switching Speed, $t_{\text{ON}} < 150\text{ns}$
- Guaranteed Break-Before-Make action (PS322) eliminates momentary crosstalk
- Rail-to-Rail Analog Signal Dynamic Range
- Low Power Consumption, $<1.25\text{mW}$
- Packaging (Pb-free & Green):
 - 8-pin MSOP (U)
 - 8-pin SOIC (W)

Applications

- Audio Switching and Routing
- Portable Instruments
- Data Acquisition Systems
- Sample-and-Holds
- Telecommunication Systems
- Battery-Powered Systems

Description

The PS320/PS321/PS322 are improved high-precision, medium voltage analog switches designed to operate with $\pm 3V$ to $\pm 8V$ power supplies. The PS320 is a dual, single-pole single-throw (SPST), normally open (NO) switch. The PS321 has the same pinout as the PS320 but it has two normally closed (NC) switches. The PS322 has one normally open (NO) and one normally closed (NC) switch per package. When on, each switch conducts current equally well in either direction. In the off state, each switch blocks voltages up to the power-supply rails.

With $\pm 5V$ power supplies, the PS320/PS321/PS322 guarantee $<35\text{ohm}$ ON-resistance. ON-resistance matching between channels is within 2ohm. ON-resistance flatness is less than 4ohm over the specified range. All three devices guarantee low leakage currents ($<100\text{pA @ } 25^\circ\text{C}$, $<10\text{nA @ } +85^\circ\text{C}$) and fast switching speeds ($t_{\text{ON}} < 150\text{ns}$). Break-before-make switching action protects against momentary crosstalk (PS322).

For single-supply operation the PS323/PS324/PS325 are recommended.

Absolute Maximum Ratings

Voltages Referenced to V-	
V+	-0.3V to +17V
V _{IN} , V _{COM} , V _{NC} , V _{NO} ⁽¹⁾	(V-) -2V to (V+) +2V or 30mA, whichever occurs first
Current (any terminal)	30mA
Peak Current, COM, NO, NC (pulsed at 1ms, 10% duty cycle)	100mA
ESD per Method 3015.7	> 2000V

Thermal Information

Continuous Power Dissipation	
Plastic DIP (derate 6mW/°C above +70°C)	500mW
Narrow SO (derate 6mW/°C above +70°C)	450mW
MSOP (derate 4mW/°C above +70°C)	330mW
Storage Temperature	-65°C to +150°C
Lead Temperature (soldering, 10s)	+300°C

Note 1:

Signals on NC, NO, COM, or IN exceeding V+ or V- are clamped by internal diodes. Limit forward diode current to maximum current rating

Caution:

Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification is not implied.

Electrical Specifications - Dual Supplies (V± = ±5V ±10%, V_{INH} = 3.5V, V_{INL} = 1V)

Parameter	Symbol	Conditions	Temp. (°C)	Min. ⁽¹⁾	Typ. ⁽²⁾	Max. ⁽¹⁾	Units
Analog Switch							
Analog Signal Range ⁽³⁾	V _{ANALOG}		Full	V-		V+	V
ON-Resistance	R _{ON}	V+ = 4.5V, V- = -4.5V, V _{NO} or V _{NC} = ±3.5V I _{COM} = 1mA,	25		16	35	ohm

Negative Supply Current	I_{-}		25	- 125	- 80			
			Full	- 200				

Notes:

- The algebraic convention, where the most negative value is a minimum and the most positive is a maximum, is used in this data sheet.
- Typical values are for DESIGN AID ONLY, not guaranteed or subject to production testing.
- Guaranteed by design
- $\Delta R_{ON} = \Delta R_{ON} \text{ max. } -\Delta R_{ON} \text{ min.}$
- Flatness is defined as the difference between the maximum and minimum value of on-resistance measured.
- Leakage parameters are 100% tested at maximum rated hot temperature and guaranteed by correlation at +25°C.
- Off Isolation = $20 \log_{10} [V_{COM} / (V_{NC} \text{ or } V_{NO})]$.
