Precautions for Soldering GL100MD1MP1

1. In case, solder reflow

Please do only one soldering at the temperature and the time within the temperature profile as shown in the figure below.

2. Other precautions

An infrared lamp used to heat up for soldering may cause a localized temperature rise in the resin.

So keep the package temperature within that specified in Item 1.

This device has pin structure connected and soldered on the epoxy resin package. Please be acknowledged that mechanical stress must not be put on the package when you solder the device by hand because there is possibility of deformation or defect of the device.

Even if within the temperature profile above, there is the possibility that the gold wire in package is broken in case that the deformation of PCB gives the affection to lead pins. Please use after confirmation the conditions fully by actual solder reflow machine.

3. Storage and management after open

3.1 Storage condition : Storage shall be in accordance with the below conditions.

Storage temp. : 5 to 30°C

3.2 Treatment after open

- (1) After open, please mount at the conditions of humidity 60%RH or less and temperature 5 to 25°C within 2 days.
- (2) In case that long term storage is needed, devices should either be stored in dry box, or re-sealed to moist-proof bag with siccative and leave them in the environment where the temperature is 5 to 30°C, at the humidity condition of below 70%RH. Devices must be mounted within 2 weeks.

3.3 Baking before mounting

In case that it could not carry out the above treatment, it is able to mount by baking treatment.

However baking treatment shall be limited only 1 time.

Recommended conditions : 125°C, 16 to 24 hours

- ※ Baking treatment can not carry out at the packaged condition. Please carry out baking at the condition of mounting on PCB or getting on the metal tray.
