Description

RSP-1000 is a 1KW single output enclosed type AC/DC power supply with 1U low profile. This series operates for 90~264VAC input voltage and offers the models with the DC output mostly demanded from the industry. Each model is cooled by the built-in fan with fan speed control, working for the temperature up to 60℃. Moreover, RSP-1000 provides vast design flexibility by equipping various built-in functions such as the output programming, active current sharing, remote ON-OFF control, auxiliary power, etc.

NOTE

1. All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25℃ of ambient temperature.
2. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor.
3. Tolerance : includes set up tolerance, line regulation and load regulation.
4. Derating may be needed under low input voltages. Please check the derating curve for more details.
5. The power supply is considered a component which will be installed into a final equipment. All the EMC tests are been executed by mounting the unit on a 360mm*360mm metal plate with 1mm of thickness. The final equipment must be re-confirmed that it still meets EMC directives. For guidance on how to perform these EMC tests, please refer to “EMI testing of component power supplies.” (as available on https://www.meanwell.com//Upload/PDF/EMI_statement_en.pdf)
6. The ambient temperature derating of 3.5℃/1000m with fanless models and of 5℃/1000m with fan models for operating altitude higher than 2000m(6500ft).

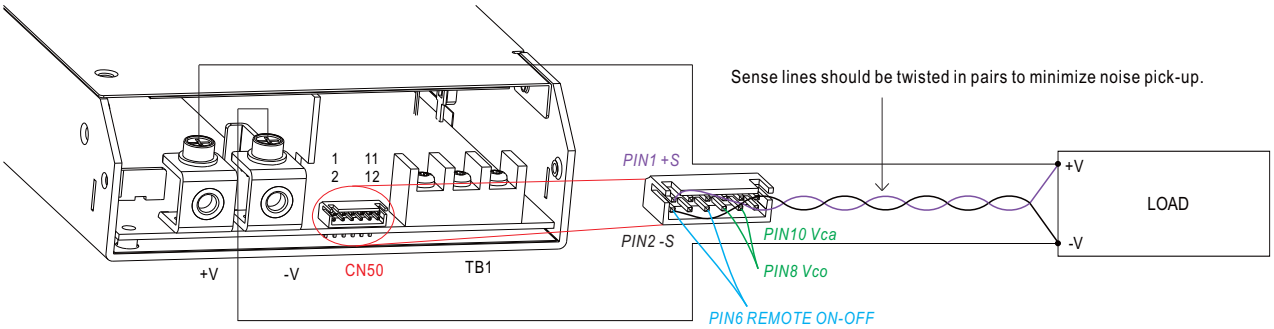
■ Function Manual

1.Remote Sense

※ The Remote Sense compensates voltage drop on the load wiring up to 0.5V



◎ The +*S* signal should be connected to the positive terminal of the load whereas -*S* signal to the negative terminal.

◎ This configuration is based on the assumption the Output Voltage Programming is not activated and power supply is ON.

Fig 1.1

2.Remote ON-OFF Control

※ The power supply can be turned ON-OFF indivicluaaly or along with other units by using the “Remote ON-OFF” function.

Between *Remote ON-OFF (pin6)* and *-S(pin2)*	Power Supply Status
Switch Short	ON
Switch Open	OFF

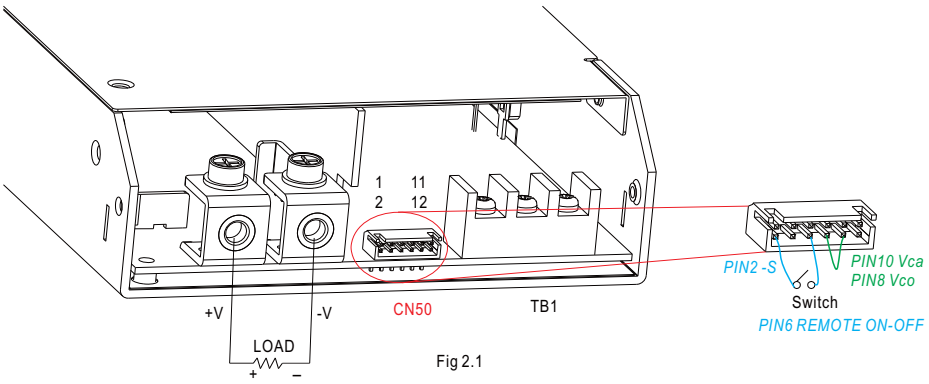


Fig 2.1

◎ The power supply is shipped, by factory default, with *Remote ON-OFF(pin6)* and *-S(pin2)* shorted by connector.

◎ When multiple power supplies need to turn ON/OFF simultaneously by Remote ON-OFF control, -S & -V, as well as +S & +V, on each power supply should be connected.

3.DC_OK signal

※ "DC_OK" is an open collector signal. It indicates the output status of the power supply. It can operate in two ways : One is sinking current from external TTL signal ; the other is sending out a TTL voltage signal.

◎ **Sinking current from external TTL signal:** The maximum sink current is 10mA and the maximum external voltage is 5.6V.

◎ **Sending out TTL voltage signal :**

Between *DC- OK(pin5)* and *GND(pin11&12)*	Output Status
0 ~ 1V	ON
3.3 ~ 5.6V	OFF

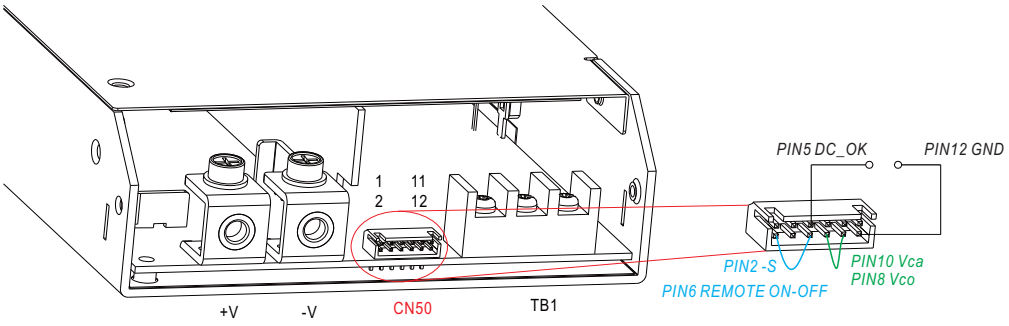

Fig 3.1

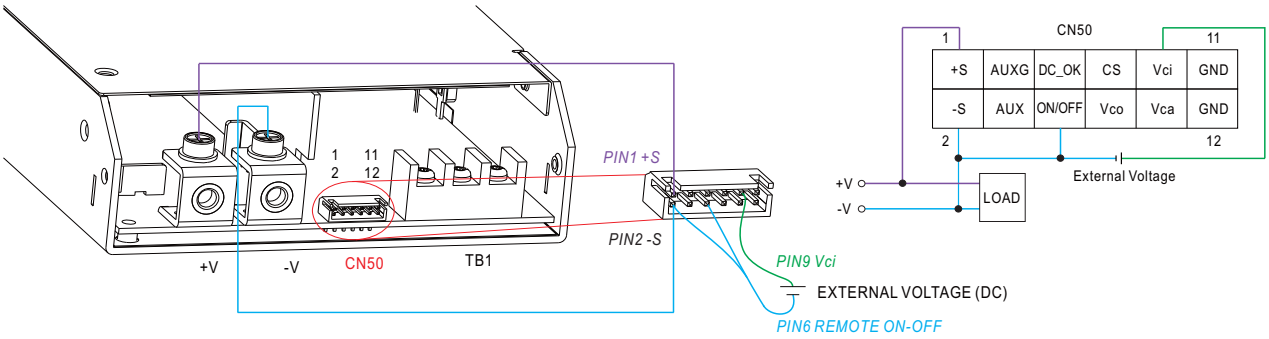
4. Output Voltage Programming (or, PV / remote voltage programming / remote adjust / margin programming / dynamic voltage trim)

※ In addition to the adjustment via the built-in potentiometer, the output voltage can be trimmed to 40~110% of the nominal voltage by applying either an EXTERNAL VOLTAGE or an EXTERNAL RESISTANCE.

(1)Applying EXTERNAL VOLTAGE between "*Vci*"*(pin9)* and "*-S*"*(pin2)* as shown in Fig4.1

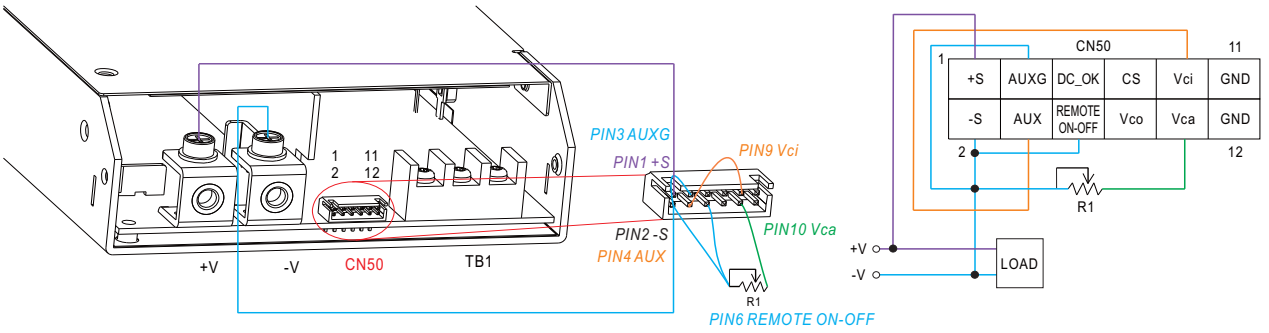


◎+*S* & +*V* and -*S* & -*V* also need to be connected on CN50

Fig 4.1

(2)Applying EXTERANL RESISTANCE as shown in Fig4.2 & Fig 4.3

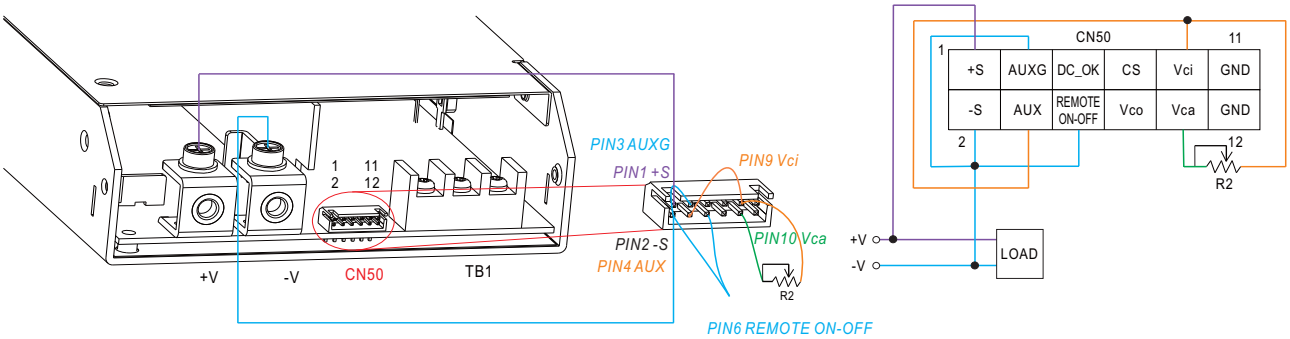
(A) Output voltage goes down



◎+*S* & +*V* and -*S* & -*V* also need to be connected on CN50.

Fig 4.2

(B)Output voltage goes up



◎+*S* & +*V* and -*S* & -*V* also need to be connected on CN50.

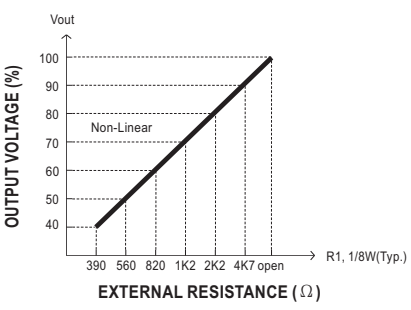

Fig 4.2.1

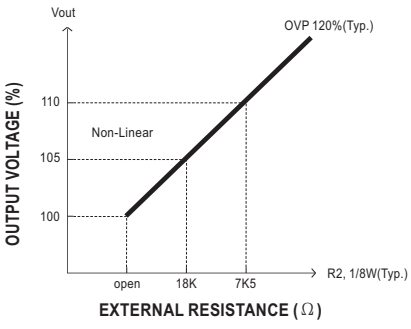

Fig 4.3.1

※ Caution: By factory default, the Output Voltage Programming is not activated, and *Vco (pin8)* and *Vca(pin10)* are shorted by connector. Whenever this function is not needed to activate, as assumed in other sections' diagrams, please keep *Vco(pin8)* and *Vca(pin10)* shorted ; other wise, the power supply will have no output.

5.Current Sharing with Remote Sense

RSP-1000 has the built-in active current sharing function and can be connected in parallel, up to 4 units, to provide higher output power as exhibited below :

※The power supplies should be paralleled using short and large diameter wiring and then connected to the load.

※ Difference of output voltages among parallel units should be less than 0.2V.

※ The total output current must not exceed the value determined by the following equation:

Maximum output current at parallel operation=(Rated current per unit)×(Number of unit)×0.9

※ When the total output current is less than 5% of the total rated current, or say (5% of Rated current per unit)×(Number of unit) the current shared among units may not be fully balanced.

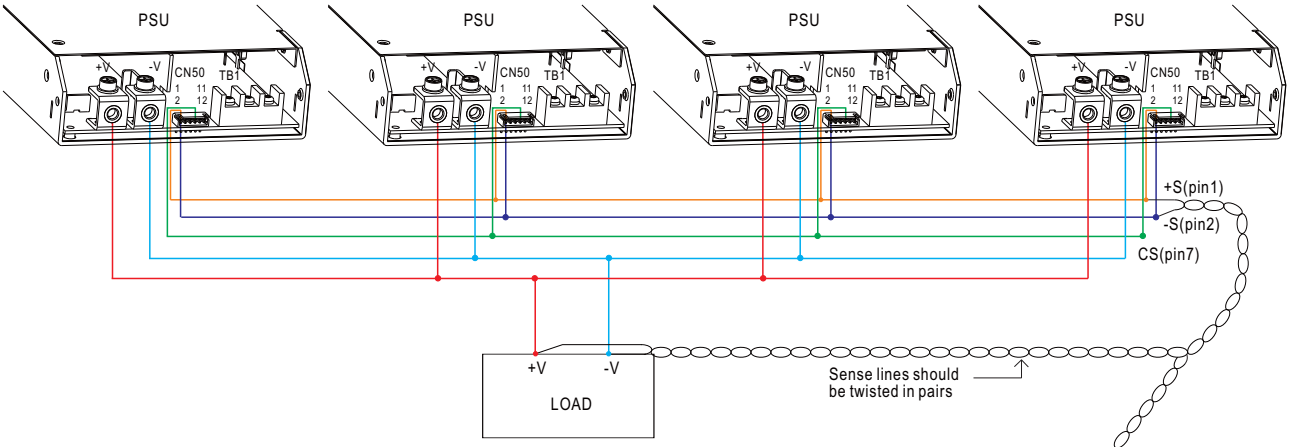

Fig 5.1

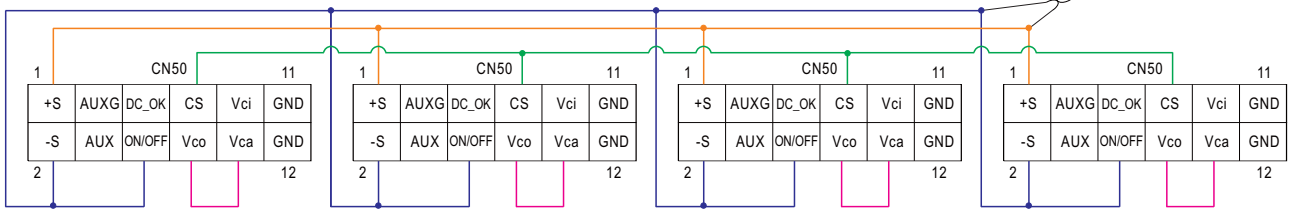

◎ +S,-S and CS are connected mutually in parallel.
