HIGH SPEED 3.3V 2K X 8 DUAL-PORT STATIC RAM WITH INTERRUPTS

71V321L

Features

- **High-speed access**
  - *Commercial & Industrial: 25/35ns (max.)*
- **Low-power operation**
  - *IDT71V321L*
    Active: 325mW (typ.)
    Standby: 1mW (typ.)
- **Two $\overline{INT}$ flags for port-to-port communications**
- **On-chip port arbitration logic (IDT71V321 only)**
- **$\overline{BUSY}$ output flag**
- **Fully asynchronous operation from either port**
- **Battery backup operation—2V data retention (L only)**
- **TTL-compatible, single 3.3V power supply**
- **Available in 52-pin PLCC, 64-pin TQFP and STQFP packages**
- **Industrial temperature range (–40°C to +85°C) is available for selected speeds**
- **Green parts available, see ordering information**

Description

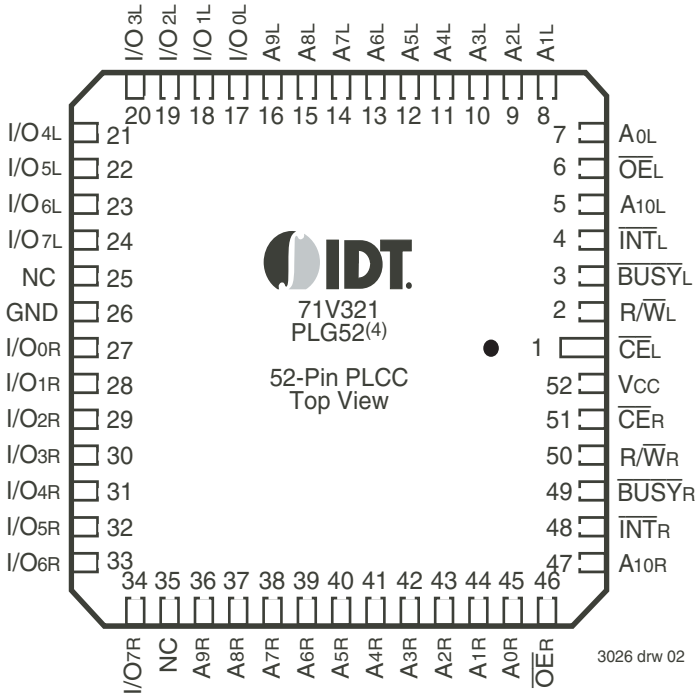
The IDT71V321 is a high-speed 2K x 8 Dual-Port Static RAMs with internal interrupt logic for interprocessor communications. The IDT71V321 is designed to be used as a stand-alone 8-bit Dual-Port RAM.

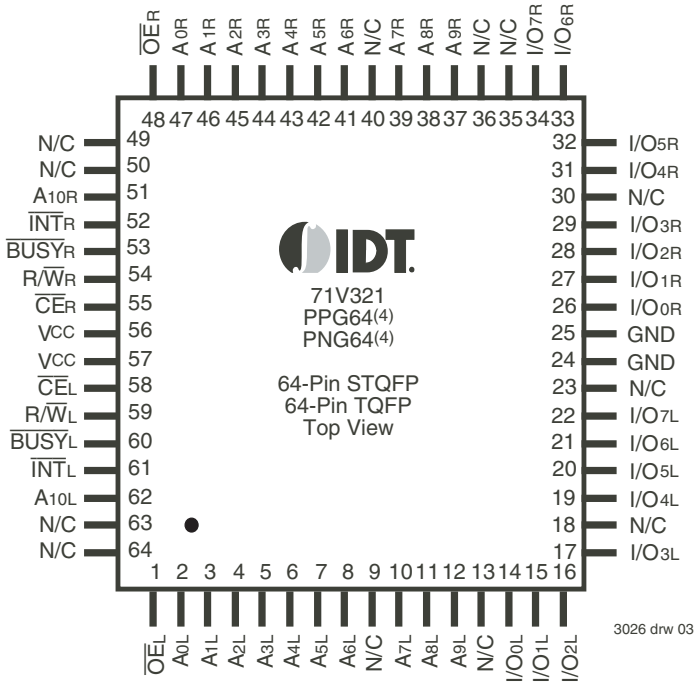
The device provides two independent ports with separate control, address, and I/O pins that permit independent, asynchronous access for reads or writes to any location in memory. An automatic power down feature, controlled by $\overline{CE}$, permits the on chip circuitry of each port to enter a very low standby power mode.

Fabricated using CMOS high-performance technology, these devices typically operate on only 325mW of power. Low-power (L) versions offer battery backup data retention capability, with each Dual-Port typically consuming 200µW from a 2V battery.

The IDT71V321 devices are packaged in a 52-pin PLCC, a 64-pin TQFP (thin quad flatpack), and a 64-pin STQFP (super thin quad flatpack).

Pin Configurations[1,2,3]





NOTES:

1. All VCC pins must be connected to power supply.
2. All GND pins must be connected to ground supply.
3. J52-1 package body is approximately .75 in x .75 in x .17 in.
   PP64-1 package body is approximately 10mm x 10mm x 1.4mm.
   PN64-1 package body is approximately 14mm x 14mm x 1.4mm.
4. This package code is used to reference the package diagram.

Absolute Maximum Ratings(1)

Symbol	Rating	Commercial & Industrial	Unit
V_{TERM}(2)	Terminal Voltage with Respect to GND	-0.5 to +4.6	V
T_A	Operating Temperature	0 to +70	°C
T_{BIAS}	Temperature Under Bias	-55 to +125	°C
T_{STG}	Storage Temperature	-65 to +150	°C
I_{OUT}	DC Output Current	50	mA

3026 tbl 01

NOTES:
1. Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of the specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
2. V_{TERM} must not exceed V_{CC} + 10% for more than 25% of the cycle time or 10ns maximum, and is limited to ≤ 20mA for the period of $V_{TERM} \geq V_{CC}$ + 10%.

Capacitance(1)

(TA = +25°C, f = 1.0MHz) TQFP Only

Symbol	Parameter	Conditions(2)	Max.	Unit
C_{IN}	Input Capacitance	V_{IN} = 3dV	9	pF
C_{OUT}	Output Capacitance	V_{OUT} = 3dV	10	pF

3026 tbl 04

NOTES:
1. This parameter is determined by device characterization but is not production tested.
2. 3dv references the interpolated capacitance when the input and output signals switch from 0V to 3V or from 3V to 0V.

Recommended Operating Temperature and Supply Voltage(1,2)

Grade	Ambient Temperature	GND	Vcc
Commercial	0°C to +70°C	0V	3.3V ± 0.3V
Industrial	-40°C to +85°C	0V	3.3V ± 0.3V

NOTES:
1. Transition is measured 0mV from Low or High-impedance voltage with Output Test Load (Figure 2).
2. This parameter is guaranteed by device characterization but is not production tested.
3. The specification for t_{DH} must be met by the device supplying write data to the RAM under all operating conditions. Although t_{DH} and t_{OW} values will vary over voltage and temperature, the actual t_{DH} will always be smaller than the actual t_{OW}.
4. 'X' in part numbers indicates power rating (S or L).

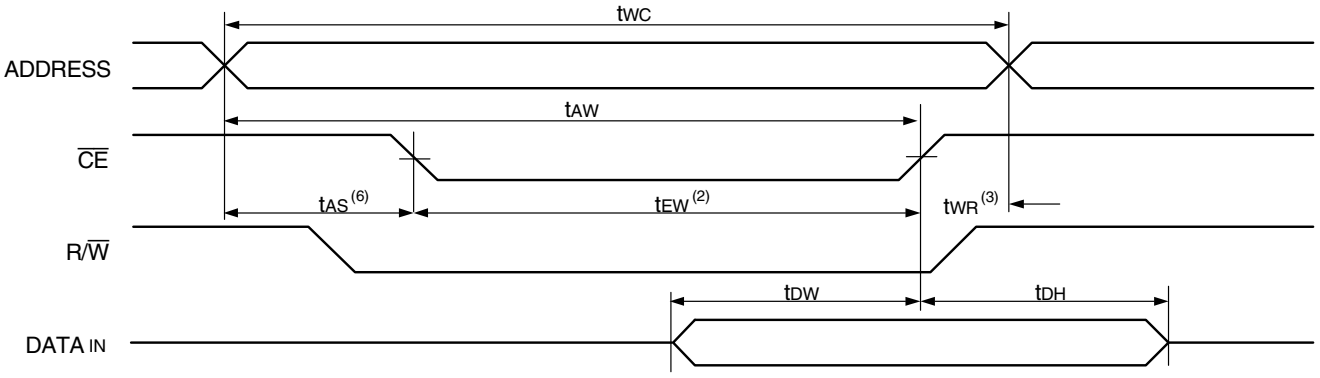
3026 drw 08

Timing Waveform of Write Cycle No. 2, ($\overline{CE}$ Controlled Timing)(1,5)



3026 drw 09

NOTES:
1. R/$\overline{W}$ or $\overline{CE}$ must be HIGH during all address transitions.
2. A write occurs during the overlap (tEW or tWP) of $\overline{CE}$ = VIL and R/W= VIL.
3. tWR is measured from the earlier of $\overline{CE}$ or R/$\overline{W}$ going HIGH to the end of the write cycle.
4. During this period, the I/O pins are in the output state and input signals must not be applied.
5. If the $\overline{CE}$ LOW transition occurs simultaneously with or after the R/$\overline{W}$ LOW transition, the outputs remain in the High-impedance state.
6. Timing depends on which enable signal ($\overline{CE}$ or R/$\overline{W}$) is asserted last.
7. This parameter is determined to be device characterization, but is not production tested. Transition is measured 0mV from steady state with the Output Test Load (Figure 2).
8. If $\overline{OE}$ is LOW during a R/$\overline{W}$ controlled write cycle, the write pulse width must be the larger of tWP or (tWZ + tDW) to allow the I/O drivers to turn off data to be placed on the bus for the required tDW. If $\overline{OE}$ is HIGH during a R/$\overline{W}$ controlled write cycle, this requirement does not apply and the write pulse can be as short as the specified tWP.

NOTES:
1. Pins $\overline{BUSY}_L$ and $\overline{BUSY}_R$ are both outputs. $\overline{BUSY}_X$ outputs on the IDT71V321 are totem-pole.
2. 'L' if the inputs to the opposite port were stable prior to the address and enable inputs of this port. 'H' if the inputs to the opposite port became stable after the address and enable inputs of this port. If t_{APS} is not met, either $\overline{BUSY}_L$ or $\overline{BUSY}_R$ = LOW will result. $\overline{BUSY}_L$ and $\overline{BUSY}_R$ outputs can not be LOW simultaneously.
3. Writes to the left port are internally ignored when $\overline{BUSY}_L$ outputs are driving LOW regardless of actual logic level on the pin. Writes to the right port are internally ignored when $\overline{BUSY}_R$ outputs are driving LOW regardless of actual logic level on the pin.

Functional Description

The IDT7V1321 provides two ports with separate control, address and I/O pins that permit independent access for reads or writes to any location in memory. The IDT71V321 has an automatic power down feature controlled by $\overline{CE}$. The $\overline{CE}$ controls on-chip power down circuitry that permits the respective port to go into a standby mode when not selected ($\overline{CE} = V_{IH}$). When a port is enabled, access to the entire memory array is permitted.

Interrupts

If the user chooses the interrupt function, a memory location (mail box or message center) is assigned to each port. The left port interrupt flag ($\overline{INT}_L$) is asserted when the right port writes to memory location 7FE (HEX), where a write is defined as the $\overline{CE}_R = R/\overline{W}_R = V_{IL}$ per Truth Table II. The left port clears the interrupt by accessing address location 7FE when $\overline{CE}_L = \overline{OE}_L = V_{IL}$, R/W is a "don't care". Likewise, the right port interrupt flag ($\overline{INT}_R$) is asserted when the left port writes to memory location 7FF (HEX) and to clear the interrupt flag ($\overline{INT}_R$), the right port must access the memory location 7FF. The message (8 bits) at 7FE or 7FF is user-defined, since it is an addressable SRAM location. If the interrupt function is not used, address locations 7FE and 7FF are not used as mail boxes, but as part of the random access memory. Refer to Truth Table II for the interrupt operation.

Busy Logic

Busy Logic provides a hardware indication that both ports of the RAM have accessed the same location at the same time. It also allows one of the two accesses to proceed and signals the other side that the RAM is "Busy". The $\overline{BUSY}$ pin can then be used to stall the access until the operation on the other side is completed. If a write operation has been attempted from the side that receives a busy indication, the write signal is gated internally to prevent the write from proceeding.

The use of $\overline{BUSY}$ Logic is not required or desirable for all applications. In some cases it may be useful to logically OR the $\overline{BUSY}$ outputs together and use any $\overline{BUSY}$ indication as an interrupt source to flag the event of an illegal or illogical operation.

Depth Expansion

The $\overline{BUSY}$ arbitration, is based on the chip enable and address signals only. It ignores whether an access is a read or write.

The $\overline{BUSY}$ outputs on the IDT71V321 are totem-pole type outputs and do not require pull-up resistors to operate. If these RAMs are being expanded in depth, then the $\overline{BUSY}$ indication for the resulting array requires the use of an external AND gate

Datasheet Document History

03/24/99:	Initiated datasheet document history
	Converted to new format
	Cosmetic and typographical corrections
	Page 2 Added additional notes to pin configurations
06/15/99:	Changed drawing format
10/15/99:	Page 12 Changed open drain to totem-pole in Table III, note 1
10/21/99:	Page 13 Deleted 'does not' in copy from Busy Logic
11/12/99:	Replaced IDT logo
01/12/01:	Page 1 & 2 Moved full "Description" to page 2 and adjusted page layouts
	Page 3 Increased storage temperature parameters
	Clarified T_A parameter
	Page 4 DC Electrical parameters–changed wording from "open" to "disabled"
	Changed ±200mV to 0mV in notes
08/22/01:	Page 4, 5, 7, 9 &11 Industrial temp range offering removed from DC & AC Electrical Chars for 35 and 55ns
01/17/06:	Page 1 Added green availability to features
	Page 14 Added green indicator to ordering information
	Page 1 & 14 Replaced old IDT™ with new IDT™ logo
08/25/06:	Page 11 Changed $\overline{INT}$"A" to $\overline{INT}$"B" in the CLEAR $\overline{INT}$ drawing in the Timing Waveform of Interrupt Mode
10/23/08:	Page 14 Removed "IDT" from orderable part number
01/25/10:	Page 4 In order to correct the DC Chars table for the 71V321/71V421L35 speed grade and the Data Retention Chars table, I Temp values have been added to each table respectively. In addition, all of the AC Chars tables and the ordering information also now reflect this I temp correction
06/25/15:	Page 2 Removed IDT in reference to fabrication
	Page 2 & 14 The package codes J52-1, PN64-1 & PP64-1 changed to J52, PN64 & PP64 respectively to match standard package codes
	Page 14 Added Tape and Reel indicator to Ordering Information
10/14/15:	Page 1 -15 Removed 71V421S/L from the part number, in the pin configurations and throughout the datasheet
	Page 1 - 15 Removed all references to Master/Slave throughout the datasheet
	Page 1 -15 Updated the Com'l and Ind speeds for the 25/35/55ns offerings in Features , in the DC & AC Chars tables, in the Ordering Information and throughout the datasheet
	Page 13 Removed Width Expansion with Busy Logic Master/Slave Arrays diagram for part numbers 71V321/71V421S/ L and updated with a Depth Expansion diagram for the single part number 71V321S/L
	Updated the corresponding Depth Expansion descriptive text in the Depth Expansion section of the datasheet
01/12/18:	Product Discontinuation Notice - PDN# SP-17-02
	Last time buy expires June 15, 2018
07/23/19:	Page 2 Updated package codes J52 to PLG52, PP64 to PPG64 and PN64 to PNG64
	Page 14 Added Orderable Part Information table
