

THE DATASHEET OF
0761451705

Pushing the density envelope to meet next-generation high-speed application demands, the Impact™ 100 Ohm Backplane Connector System features data rates up to and beyond 25 Gbps, superior signal integrity, electrical performance and modular design

The Impact™ 100 Ohm Backplane Connector System provides data rates up to and beyond 25 Gbps and superior signal density up to 30 pairs per cm (80 differential pairs per inch) when using a 6-pair system. The broad-edge-coupled transmission technology enables low cross-talk noise and high signal bandwidth while minimizing channel-performance variation across every differential pair within the system.

Impact XTR connectors provide OEM's a scalable solution, (managing speed, density and cost; pay-for-performance model), without requiring any footprint or mating backplane connector changes from legacy Impact connectors. Impact power modules are offered in three through six pair sizes in conventional, coplanar and mezzanine configurations with current ratings from 60.0 to 120.0A per module.

Designed for traditional backplane and/or midplane architectures, the Impact 100 Ohm Backplane Connector System meets the growing demand for next generation high-speed applications.

Features and Benefits

Impact™ 100 Ohm Backplane Connector System

Data rates scalable up to and beyond 25 Gbps

Support future system performance upgrades (standard Impact 100 Ohm connectors achieve up to 25 Gbps; XTR Impact 100 Ohm connectors achieve beyond 25 Gbps)

Broad-edge-coupled, differential-pair system on standard connectors

Superior density, low cross-talk noise, low insertion loss and minimal performance variation across all high-speed channels

Broad-edge-coupled, shield-to-wafer construction on XTR daughtercards

Improves signal integrity (SI) without sacrificing industry-leading density. Lowers cross-talk noise and minimizes performance variation compared to legacy Impact connectors. Supports quad routing for a reduced PCB layer count. Footprint and mate compatible with existing Impact 100 Ohm backplane products. Provides option to upgrade electrical performance when required

Differential-pair density up to 30 pairs per cm (80 pairs per linear inch) when using 6-pair configurations)

High differential pair density supports high bandwidth needs while minimizing board and system real-estate usage

Inline staggered interface

Reduced mating force by 50% over competing products in the market

Bifurcated contact beams on the daughtercard connector

Two points of contact for long-term reliability and built-in ground-signal sequencing

Easy-to-manage 1.90 by 1.35mm grid

Provides PCB routing flexibility and reduces cost

Two compliant-pin attach options (0.39 and 0.46mm)

Provides customers ultimate flexibility to optimize designs for superior mechanical and electrical performance

IEEE 10GBASE-KR and Optical Internetworking Forum (OIF) Stat Eye Compliant channel performance

Demonstrates end-to-end channel performance compliance

Applications

- Telecommunication
- Networking
(hubs, switches, routers)
- Data Center Equipment
- Storage
