FH35-25S-0.3SHW(50)**

NEW

0.3 mm Pitch, 0.9 mm above the board, Top and bottom Contact, Back-Flip actuator Flexible Printed Circuit ZIF Connectors

FH35 Series

● Small size (35 pos. shown)

■ Features

1. Low-profile

With the 0.9 mm above the board and width of 3.2 mm the connectors are used in a space saving applications.

2. Unique Back-Flip rotating actuator

The rotating actuator opens from the back of the connector, assuring reliable electrical and mechanical connection.

3. Delivered with the actuator open

FPC can be immediately inserted without the need for the opening of the actuator.

4. Easy FPC insertion

Entry chamfers at all sides of the FPC insertion slot assure correct insertion and positioning of the FPC.

5. Accepts standard FPC thickness

0.2mm thick standard Flexible Printed Circuit (FPC) can be used. This is the only ultra-low profile ZIF connector using standard FPC.

6. Conductive traces on the PCB can run under the connector

No exposed contacts on the bottom of the connector.

7. Board placement with automatic equipment

Flat upper surface and tape and reel packaging facilitate vacuum pick-up and placement. Standard reel packaging contains 5000 connectors.

8. Halogen-free *

(FH35J, FH35RW, FH35W series)

*As defined by IEC61249-2-21

Br-900ppm maximum, Cl-900ppm maximum,

Cl + Br combined-1,500ppm maximum

9. Optional 500 piece reel packaging

Standard packaging is 5,000 pieces per reel; however, 500 piece reels are possible.

(Emboss reel external diameter is 180mm.)

● Easy FPC insertion

● Completely locked

■ Connector Operation and Precautions

Operation

Exercise care when handling connectors. Follow recommendations given below.

1. As delivered

- ① Delivered with the actuator open. There is no need to operate the actuator prior to the insertion of the FPC.

2. FPC insertion (Top contact)

- ① Make sure that the conductive pads are facing up.
- ② Align the FPC perpendicular with the connector and insert it firmly all the way.

*For the bottom contact, reverse.

3. FPC correct insertion verification (Top contact)

A visual comparison of the edge of the housing opening and the FPC pattern boundary will prevent diagonal insertion and partial insertion errors.

Correct insertion

Diagonal insertion

Partial insertion

Operation

4. Locking

- 1 After FPC/FFC insertion, rotate the actuator down to a full stop, pushing it at the center.

5. FPC removal (Lock release)

Carefully rotate the actuator up to 90°, lifting it at the center.

* The actuator opens by rotating it in the direction OPPOSITE to the direction of the insertion of the FPC.
DO NOT attempt to open it from the same side as the insertion of the FPC.

Precautions when mounting connectors on the PCB

◆ Handling before mounting on PCB

Insertion of the FPC or operation of the actuator prior to mounting on the PCB is NOT RECOMMENDED.

◆ PC board warpage

Minimize the warpage as much as possible. The connector is straight within 0.1 mm max. Make sure that the mounting area flatness can accept the connector terminals without causing any failure of the solder joints.

◆ Forces on the board

◆ When braking the large PC board into individual boards exercise care NOT to damage the installed connectors.

◆ When attaching the boards or other components with the screws make sure that any stresses will NOT cause board deflections affecting the mounting areas of the connector

Other precautions

◆ When hand soldering:

Do not perform hand soldering with the FPC inserted in the connector.

- Do not apply excessive heat or touch the soldering iron anywhere other than the connector leads.
- Do not use excessive amount of solder or flux compounds.

Operation of the actuator or contacts may be affected by excessive amounts of solder or flux compounds.
