

FEATURES

- Low Supply Current **300 μ A**
- 0.2 μ A Supply Current in SHUTDOWN **\pm 10kV**
- ESD Protection **0.1 μ F**
- Operates From a Single 3.3V Supply
- Uses Small Capacitors
- Operates To 120k Baud
- Three-State Outputs are High Impedance When Off
- Output Overvoltage Does Not Force Current Back Into Supplies
- EIA/TIA-562 I/O Lines Can Be Forced to \pm 25V Without Damage
- Flowthrough Architecture

APPLICATIONS

- Notebook Computers
- Palmtop Computers

DESCRIPTION

The LTC1327 is an advanced low power, three-driver/five-receiver EIA/TIA-562 transceiver. In the no load condition, the supply current is only **300 μ A**. The charge pump only requires four 0.1 μ F capacitors.

In SHUTDOWN mode, the supply current is further reduced to 0.2 μ A. All EIA/TIA-562 outputs assume a high impedance state in SHUTDOWN and with the power off.

The LTC1327 is fully compliant with all data rate and overvoltage EIA/TIA-562 specifications. The transceiver can operate up to 120k Baud with a 1000pF/3k Ω load. Both driver outputs and receiver inputs can be forced to \pm 25V without damage, and can survive multiple \pm 10kV ESD strikes.

TYPICAL APPLICATION

3-Drivers/5-Receivers with SHUTDOWN

1327 TA01

Supply Current vs Temperature

LTC1327 • TA02

ABSOLUTE MAXIMUM RATINGS

Supply Voltage (V_{CC})	5V
Input Voltage	
Driver	-0.3V to ($V_{CC} + 0.3V$)
Receiver	-25V to 25V
On/Off Pin	-0.3V to ($V_{CC} + 0.3V$)
Output Voltage	
Driver	-25V to 25V
Receiver	-0.3V to ($V_{CC} + 0.3V$)
Short-Circuit Duration	
V^+	30 sec
V^-	30 sec
Driver Output	Indefinite
Receiver Output	Indefinite
Operating Temperature Range	
Commercial LTC1327C	0°C to 70°C
Storage Temperature Range	-65°C to 150°C
Lead Temperature (Soldering, 10 sec).....	300°C

The ● denotes specifications which apply over the operating temperature ($0^\circ C \leq T_A \leq 70^\circ C$).

Note 1: Absolute Maximum Ratings are those values beyond which the life of the device may be impaired.

Note 2: Supply current is measured with driver and receiver output unloaded and driver inputs tied high.

Note 3: Supply current measurement in SHUTDOWN mode is performed with $V_{ON/OFF} = 0V$.

PIN FUNCTIONS

V_{CC}: 3.3V Input Supply Pin. Supply current 0.2µA in the SHUTDOWN mode. This pin should be decoupled with a 0.1µF ceramic capacitor.

GND: Ground Pin.

ON/OFF: TTL/CMOS Compatible Shutdown Pin. A logic low puts the device in SHUTDOWN mode which reduces the supply current to 0.2µA and places all drivers and receivers in high impedance state. This pin cannot float.

V⁺: Positive Supply Output (EIA/TIA-562 Drivers). $V^+ \cong 2V_{CC} - 1V$. This pin requires an external capacitor

$C = 0.1\mu F$ for charge storage. The capacitor may be tied to ground or 3.3V. With multiple devices, the V⁺ and V⁻ pins may be paralleled into common capacitors. For large numbers of devices, increasing the size of the shared common storage capacitors is recommended to reduce ripple.

V⁻: Negative Supply Output (EIA/TIA-562 Drivers). $V^- \cong -(2V_{CC} - 1.3)$. This pin requires an external capacitor $C = 0.1\mu F$ for a charge storage.

PIN FUNCTIONS

C1⁺, C1⁻, C2⁺, C2⁻: Commutating Capacitor Inputs. These pins require two external capacitors $C = 0.1\mu\text{F}$. One from C1⁺ to C1⁻, and another from C2⁺ to C2⁻. To maintain charge pump efficiency, the capacitor's effective series resistance should be less than 20Ω .

DR IN: EIA/TIA-562 Driver Input Pins. Inputs are TTL/CMOS compatible. Inputs should not be allowed to float. Tie unused inputs to V_{CC} .

DR OUT: Driver Outputs at EIA/TIA-562 Voltage Levels. Outputs are in a high impedance state when in SHUT-

DOWN mode or $V_{CC} = 0\text{V}$. The driver outputs are protected against ESD to $\pm 10\text{kV}$ for human body model discharges.

RX IN: Receiver Inputs. These pins can be forced to $\pm 25\text{V}$ without damage. The receiver inputs are protected against ESD to $\pm 10\text{kV}$ for human body model discharges. Each receiver provides 0.4V of hysteresis for noise immunity.

RX OUT: Receiver Outputs With TTL/CMOS Voltage Levels. Outputs are in a high impedance state when in SHUT-DOWN mode to allow data line sharing.
