### Description

The MASW-008322 is a versatile, broadband, high isolation SPDT switch offered in a lead-free 4 mm 24-lead PQFN surface mount plastic package. The design incorporates both series and shunt circuit elements with the locations optimized to achieve outstanding broadband performance to 20 GHz. The combination of broadband performance along with very fast switching and excellent settling time make this device ideal for many applications, including Test & Measurement, EW and broadband communication systems.

The MASW-008322 is fabricated using MACOM's mature 0.5  $\mu\text{m}$  Low Gate-Lag pHEMT process. This robust process features full surface passivation for high performance & high reliability.
