SxX8xSx Series
EV Series 0.8 A Sensitive SCRs

Agency Approvals and Environmental

Environmental Approvals

Product Summary

Characteristic	Value	Unit
$I_{T(RMS)}$	0.8	A
V_{DRM} / V_{RRM}	400, 600, or 800	V
I_{GT}	5 to 200	μA

Schematic Symbol

Product Description

This new component series offers high static dv/dt and low turn off time (t_q) sensitive SCR. It is specifically designed for Ground Fault Circuit Interrupter (GFCI) and Gas Ignition applications. All SCRs junctions are glass-passivated to ensure long term reliability and parametric stability.

Features

- Surge capability > 10 A
- Blocking voltage (V_{DRM} / V_{RRM}) capability up to 800 V
- High dv/dt noise immunity
- Improved turn-off time (t_q) < 25 μsec
- Sensitive gate for direct microprocessor interface
- Through-hole and surface-mount packages
- RoHS compliant and Halogen-Free

Applications

The SxX8xSx EV series is specifically designed for Ground Fault Circuit Interrupter (GFCI) and gas ignition applications.

9. Design Considerations

Careful selection of the correct component for the application's operating parameters and environment will go a long way toward extending the operating life of the Thyristor. Good design practice should limit the maximum continuous current through the main terminals to 75% of the component rating. Other ways to ensure long life for a power discrete semiconductor are proper heat sinking and selection of voltage ratings for worst case conditions. Overheating, overvoltage (including dv/dt), and surge currents are the main killers of semiconductors. Correct mounting, soldering, and forming of the leads also help protect against component damage.
