SI32261-C-GM1R**

### Description

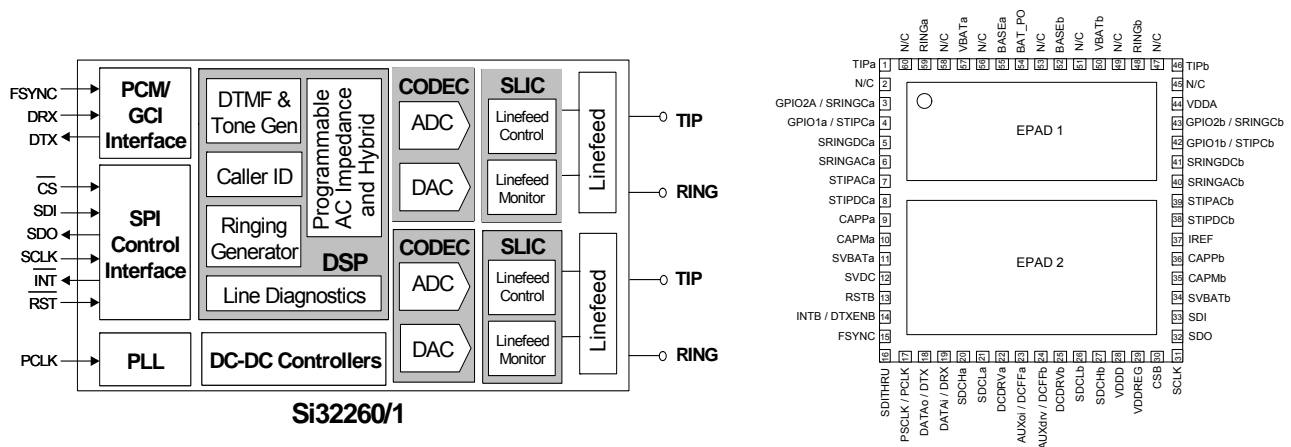

The Si32260/1 Dual ProSLIC® devices, in a single package, implement two complete foreign exchange station (FXS) telephony interfaces. The Si32260/1 devices operate from a 3.3 V supply and have standard PCM/SPI or GCI bus digital interfaces. A pair of built-in dc-dc converter controllers can be used to automatically generate the optimal battery voltage required for each line-state, optimizing efficiency and minimizing heat generation. The Si32260/1 devices are designed to operate not only with a tracking battery supply for each channel for lowest power consumption, but also with shared battery supplies, for lowest cost. When used with shared battery supplies, the internal dc-dc controller operates in Tracking Shared Supply (TSS) mode to deliver power consumption lower than typical fixed voltage shared rail designs. Self-testing and metallic loop testing (MLT) (e.g., GR-909) is facilitated by the built-in DSP, monitor ADC, and test load. The devices are available with linefeed voltage ratings of -110 V (Si32260) or -140 V (Si32261) to support high voltage ringing, and both devices support wideband audio for better-than-PSTN voice quality. The Si32260/1 devices are available in a 8 x 8 mm 60-pin QFN package.

### Applications

- VoIP gateways and routers
- xDSL IADs
- Optical Network Terminals/Units (ONT/U)
- Analog Terminal Adapters (ATA)
- Cable eMTA
- Wireless Fixed Terminals (WFT)
- Wireless Local Loop (WLL)
- WiMAX CPE
- Private Branch Exchange (PBX)
- VoIP MDU gateways

### Si32260/61 Features

- Two complete FXS channels in 8 x 8 mm
- Performs all BORSCHT functions
- Ideal for short- or long-loop applications
- Ultra low power consumption
- Internal balanced or unbalanced ringing
- Patented low power ringing
- Adaptive ringing
- Simplified configuration and diagnostics
  - Supported by ProSLIC API
  - GR-909 loop diagnostics
  - Audio diagnostics with loopback
  - Integrated test load
- Wideband voice support
- On-hook transmission
- Loop or ground start operation
- Smooth polarity reversal
- Pulse metering
- PCM and SPI bus digital interfaces with programmable interrupts
- Software-programmable parameters:
  - Ringing frequency, amplitude, cadence, and waveshape
  - Two-wire ac impedance
  - Transhybrid balance
  - DC current loop feed (10–45 mA)
  - Loop closure and ring trip thresholds
  - Ground key detect threshold
- Integrated dc-dc controllers with direct connection to MOSFET
- Three high voltage supply options
  - Full tracking
  - Tracking shared supplies
  - Fixed rail
- DTMF generator/decoder
- A-Law/ $\mu$ -Law companding, linear PCM
- GCI/IOM-2 mode support
- 3.3 V operation
- Pb-free/RoHS-compliant packaging
