7-3 Output Over Current Protection Function

Output voltage will be lowered when output current is in state of over current and start operating over current protection circuit. (Over current protection set point : 105 to 250% of rating current value)

It will automatically recover when over current state is released. In order to avoid from damage, please do not hold the over current state for more than 30sec.

If by any reason does not auto recover after releasing, please off the output at ON/OFF control or switch off to reactivate.

7-4 Low Input Voltage Protection Function

This product builds in low input voltage protection function to avoid malfunction at low input voltage. Commencing operation and termination voltage range is within the below table.
