

**THE DATASHEET OF
EPC1441LI20N**

This datasheet provides package and thermal resistance information for mature Altera® devices. Package information includes the ordering code reference, package acronym, leadframe material, lead finish (plating), JEDEC outline reference, lead coplanarity, weight, moisture sensitivity level, and other special information. The thermal resistance information includes device pin count, package name, and resistance values.

This datasheet includes the following sections:

- “Device and Package Cross Reference” on page 1
- “Thermal Resistance” on page 23
- “Package Outlines” on page 44

 For more package and thermal resistance information about Altera devices that are not listed in this datasheet, refer to the [Package and Thermal Resistance](#) page of the Altera website.

 For information about trays, tubes, and dry packs, refer to *AN 71: Guidelines for Handling J-Lead, QFP, and BGA Devices*.

 RoHS-compliant devices are compatible with leaded-reflow temperatures. For more information, refer to [Altera’s RoHS-Compliant Devices](#) literature page.

Device and Package Cross Reference

Table 2 through Table 22 lists the device, package type, and number of pins for each Altera device listed in this datasheet. Altera devices listed in this datasheet are available in the following packages:

- Ball-Grid Array (BGA)
- Ceramic Pin-Grid Array (PGA)
- FineLine BGA (FBGA)
- Hybrid FineLine BGA (HBGA)
- Plastic Dual In-Line Package (PDIP)
- Plastic Enhanced Quad Flat Pack (EQFP)
- Plastic J-Lead Chip Carrier (PLCC)
- Plastic Quad Flat Pack (PQFP)
- Power Quad Flat Pack (RQFP)
- Thin Quad Flat Pack (TQFP)
- Ultra FineLine BGA (UBGA)

Table 1 lists the Altera devices and the associated table locations.

Arria GX Devices

Table 2 lists the device name, package type, and number of pins for the Arria GX device family.

 The package type entries with “Option #” refer to instances where multiple package options exist for a given package type and pin count. The option number identifies the specific type used by the corresponding device density.

Thermal Resistance

Altera follows JEDEC JESD51 series standards to provide thermal resistances. The purpose of the JESD51 standards is to compare the thermal performance of various packages under standardized test conditions. While standardized thermal resistances can help compare the relative thermal performance of different packages, they cannot apply directly to the many specific applications because JESD51 test conditions may not match a specific application. Several factors affect the thermal performance of a device in a user's application. These include power dissipation in the component; airflow velocity, direction and turbulence level; power in adjacent components; two-sided vs. one-sided active component mounting; printed circuit board (PCB) orientation & construction; and adjacent boards and their power dissipation. It may be necessary to test or model specific applications. This testing and modeling of a component user's specific applications is the user's responsibility.

Table 26 through Table 43 provide θ_{JA} (junction-to-ambient thermal resistance) and θ_{JC} (junction-to-case thermal resistance) values for the Altera device families. Altera reserves the right to make changes to thermal resistances without notice in the future.

Table 25 lists the mature Altera devices and the associated table locations.

Altera is transitioning to an industry-standard copper lid for its thermally enhanced BGA and thermally enhanced Flip Chip FBGA package offerings.

 For more information, refer to *Process Change Notice PCN0214*.

This change affects the APEX 20KE, APEX 20KC, APEX II, Mercury, and Excalibur device families. Therefore, two thermal resistance specifications are provided for devices affected by this change. The older packages are identified as using the aluminum silicon carbide (AlSiC) lid, while the newer packages are identified as using the copper (Cu) lid.

Thermally enhanced BGA and thermally enhanced Flip Chip FBGA packages offered in the newer Altera families, including Stratix and Stratix GX, were introduced using an industry-standard Cu lid. Therefore, these device specifications include only a single thermal resistance specification.

Contact Altera if you need typical +/- values of A dimensions for thermal analysis. The max numbers are provided for physical layout.

Note to Table 37:

- (1) “fin” is an extra heat sink that customers can add to the device. Several vendors make heat sinks, and they all have different sizes. Altera performed the thermal calculations in Table 37 using the following fin specifications: width: 0.25 mm; height: 7.0 mm; pitch: 1.5 mm; base thickness: 0.5 mm.

Package Outlines

The package outlines on the following pages are listed in order of ascending pin count. Altera package outlines meet the requirements of *JEDEC Publication No. 95*.

All lidless flip chip and wire bond packages are non-vented packages. All other flip chip packages are vented packages.

8-Pin Plastic Dual In-Line Package (PDIP)—Wire Bond

- All dimensions and tolerances conform to ASME Y14.5M - 1994.
- Controlling dimension is in inches.
- Pin 1 may be indicated by an ID dot, or a special feature, in its proximity on package surface.

240-Pin Power Quad Flat Pack (RQFP)—Wire Bond

- All dimensions and tolerances conform to ASME Y14.5M – 1994.
- Controlling dimension is in millimeters.
- Pin 1 may be indicated by an ID dot, or a special feature, in its proximity on package surface.

| Package Information | |
|----------------------------|--|
| Description | Specification |
| Ordering Code Reference | R |
| Package Acronym | RQFP |
| Leadframe Material | Copper |
| Lead Finish (Plating) | Regular: 85Sn:15Pb (Typ.) Pb-free: Matte Sn |
| JEDEC Outline Reference | MS-029 Variation: GA |
| Lead Coplanarity | 0.003 inches (0.08mm) |
| Weight | 15.4 g (Typ.) or 8.5 g (Typ.) (1) |
| Moisture Sensitivity Level | Printed on moisture barrier bag |

Note:

- (1) The lighter weight is due to the change in heat slug material used (from nickel-plated copper to anodized aluminum). Refer to PCN1002.

1152-Pin FineLine Ball-Grid Array (FBGA), Option 1—Flip Chip

- All dimensions and tolerances conform to ASME Y14.5M - 1994.
- Controlling dimension is in millimeters.
- Pin A1 may be indicated by an ID dot, or a special feature, in its proximity on package surface.

| Package Information | |
