## 1.2V to 3.6V Universal Bidirectional Level Shifter with Automatic Direction Control

### Features

- PI4ULS3V16 is designed for low voltage operation: 1.2V to 3.6V
- Universal bidirectional level shifting with automatic direction control
- Fast bus speeds up to 180 Mbps for push-pull application
- Drive Capability 12mA
- Independent translation of each bit
- Each supply rail is configurable over supply range
- ESD Protection exceeds JESD22
- -2000V Human Body Model (A114-B)
- -200V Machine Model (A115-A)
- Latch-up performance exceeds 100mA per JESD 78
- Industrial operation at -40 °C to +85 °C
- Package: 56-contact plastic 197-mil TQFN

### Pin Configuration

### Description

PI4ULS3V16, is a 16-bit (dual-octal) non-inverting bus transceiver with two separate supply rails: A port (VCCA) and B port (VCCB) are set to operate at 1.2V to 3.6V. This arrangement permits universal bidirectional translation of differential signal levels over the voltage ranges.

The PI4ULS3V16 is designed for asynchronous communication between data buses. Data is transmitted from the A bus to the B bus, or vice versa, without direction control. All AX, and BX are tri-stated when data is coming from both directions at the same time. The output-enable ( $\overline{OE}$ ) input is used to disable outputs so buses are isolated.

The control pins  $xSEL$ ,  $x\overline{OE}$ , TEST\_EN and OUT\_SEL are supplied by VCCB.

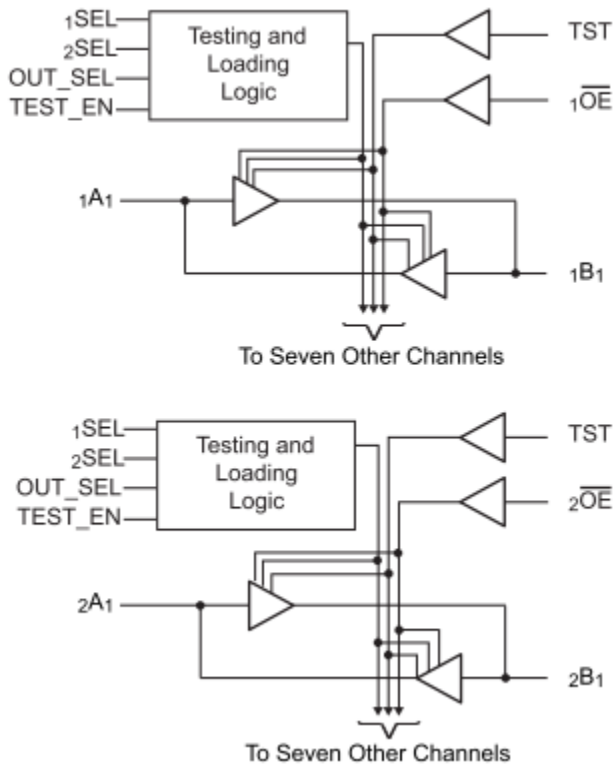

To ensure the high impedance state during power-up or power-down, the output-enable ( $\overline{OE}$ ) input should be tied to VCC through a pull-up resistor: the minimum value of the resistor is determined by the current-sinking capability of the driver.

### Applications

- Voltage Translation
- Bus Relay

### Pin Description

Pin Name	Description
$x\overline{OE}$	3-State Output Enable Inputs (Active Low)
$xSEL$	Outputs Loading Selection
$xAx$	Side A Inputs/Outputs
$xBx$	Side B Inputs/Outputs
TEST_EN	Enable Test Mode
OUT_SEL	Output impedance select
GND	Ground
VCCA, VCCB	Power
TSTx	Internal test pins. For normal usage, please tie to ground

**Note:**

- 1 The input negative voltage and output voltage ratings may be exceeded if the input and output current ratings are observed.
- 2 This value is limited to 3.6V maximum.
- 3 Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

### Parameter Measurement Information

**Figure 2. Load Circuit and Voltage Waveforms**

**Notes:**

1.  $C_L$  includes probe and jig capacitance.
2. All input pulses are supplied by generators having the following characteristics:  $PRR \leq 10Mz$ ,  $Z_O = 50\Omega$ ,  $t_r \leq 2.5ns$ ,  $t_f \leq 2.5ns$ .
3. The outputs are measured one at a time with one transition per measurement.
4.  $V_{CCI}$  defines the input port ( $V_{CCA}$  or  $V_{CCB}$ ).
5.  $V_{CCO}$  defines the output port ( $V_{CCA}$  or  $V_{CCB}$ ).
