# KARAOKE echo IC

## BU9253AS / BU9253FS / BU9255FS

The BU9253AS, BU9253FS and BU9255FS are single-chip ICs that contain all the components needed to configure a KARAOKE echo system: an A / D and D / A converter, SRAM, LPF, and mixer for mixing source signals. With these ICs, an echo function can be configured easily and with minimum external components.

●Applications

KARAOKE functions for portable stereo sets, mini component stereo sets, video CDs and DVDs, etc.

●Features

- 1) Echo mixing ratio is adjustable with a DC voltage.
- 2) A second order LPF can be configured with the internal amplifier and an attached capacitor and resistor.
- 3) Delay time of 131ms. (when  $f_{CLK} = 357kHz$ )
- 4) Internal mute function.
- 5) Single power supply (5V).

●Application example (for BU9253FS / BU9255FS)

Fig. 2

(1) Mute control functions

Pin 15 voltage (pin 17)	Mode
H	Unmuted (operating state)
M	Muted
L	Clock stop and muted

• When switching between the muted and unmuted state (pin 15 (pin 17) L→M→H), the pin 15 (pin 17) M time should be longer than one SRAM cycle. This is to assure stability by initializing the SRAM before mode switching.

Note: Figures in parentheses ( ) are for BU9253AS.

(2) Differences between BU9253AS / FS and BU9255FS

There is a difference regarding the signal stopping for muting. With BU9253AS / FS, the output from pin 8 (pin 9) is stopped during muting. With BU9255FS, the output from pin 5 is stopped during muting.

(3) Setting the echo loop gain

Echo loop ATT  $V_{IN} - V_{DLY} \dots A = \frac{V_{DLY}}{V_{IN}} (A < 1)$

\* With Pin NO. BU9253FS

Fig. 3

With  $V_{OMax}$  being the maximum amplitude of  $V_o$  at this time (when the phases, including that of the DLY circuit, are in alignment):

$$V_{OMax} = (1 + A + A^2 + \dots) V_{IN} = \sum_{K=0}^{\infty} A^K \cdot V_{IN} = \frac{1}{1-A} V_{IN}$$

Thus, maximum allowable input is the value of  $V_{OMax}$  provided the specifications ( $1 = A$ ). Assuming a feedback ratio ( $A$ ) of 0.7 and a maximum  $V_{OUT}$  of 4.0  $V_{P-P}$ ,  $V_{IN}$  must be less than 1.2  $V_{P-P}$ .
