Note 4 : When non-authorized tools are used, please consult with Hirose sales representative about provision of the drawing of the crimping tool.

## Crimping

### Items required prior to start crimping

The work-related documents shown below are required before starting harness assembly.

(The ● mark represents required documents.)

Please contact your Hirose sales representative if you do not have these documents.

Document Title	Description	Automatic Crimping Machine	Hand Crimping Tool	Remarks
Crimping Machine Main Unit Instruction Manual	Explanation of main press machine unit	●	—	Bundled with purchase of main press machine unit.
Applicator Spare Parts Identification	Explanation for Applicator installation	●	—	Bundled with purchase of applicator.
Crimp Conditions	Standard Crimp Height and Tensile Strength Values	●	—	
Crimp Quality Standards	Various standards for crimping conditions	●	—	
Operating Instructions for Hand Tool	Crimp height, Standard values of tensile strength and others	—	●	Bundled with purchase of hand tool.
Harness Procedure Manual	Harness Procedure	●	●	Ask a Hirose sales personnel to provide them.

### Tools

When crimping work is applied to our contacts, use the tools designated by Hirose.

※Crimping performed with tools other than those designated should be avoided as it may result in contact failure, disconnection of cable, etc.

※The operating instructions manual is available for the crimping machine and the applicator. Be sure to carefully read the operating instructions manual before beginning work.

### Applicable Cables

Check that the cables to be used are within the applicable range.

If you intend to use a cable other than those recommended, contact a sales representative.

[Precautions]

- Cables applicable to crimping connectors are tin-plated stranded soft-copper wire.
- Avoid crimping solid wire, wires with polyester threads or tin coated wires.
- Avoid crimping two cables together.
- The crimp height setting values (Note) may vary between tin-plated and gold-plated terminals even if the same electric wires are used.
- The crimp height setting values (Note) may vary depending on the difference in the core wire configuration even if the computed cross-sectional area is the same.

Note : The crimp height is an important item that determines crimping quality. We execute crimping tests for each electric wire to ensure the optimal value for the crimp height with high precision, thereby ensuring optimal setup values.

## Application Pattern

## Precautions

1. Cleaning Condition	Refer to the "Wire-to-Board Connector Use Handbook".
2. Connection Condition	Refer to the "Wire-to-Board Connector Use Handbook".
3. Cautions	The color of the plastic molding may differ slightly depending on product lot and future storage conditions but this does not affect the product performance. Black spots may appear on the mold resin but this does not affect the product quality.
4. Precaution	Please refer to the following documents. <ul style="list-style-type: none"> <li>■ Crimp Quality Standards (ETAD-H0909-00, ETAD-H0913-00)</li> <li>■ Harness Procedure Manual (ATAD-H0677-00)</li> <li>■ Extraction Tool Procedure Manual</li> <li>■ User Guide for Wire-to-Board Connectors</li> </ul>

## While Taking into Consideration
