

**THE DATASHEET OF  
CA5420AMZ96**

## 0.5MHz, Low Supply Voltage, Low Input Current BiMOS Operational Amplifiers

The CA5420A is an integrated circuit operational amplifier that combines PMOS transistors and bipolar transistors on a single monolithic chip. It is designed and guaranteed to operate in microprocessor logic systems that use  $V_+ = 5V$ ,  $V_- = GND$ , since it can operate down to  $\pm 1V$  supplies. It will also be suitable for 3.3V logic systems.

The CA5420A BiMOS operational amplifier features gate-protected PMOS transistors in the input circuit to provide very high input impedance, very low input currents (less than 1pA). The internal bootstrapping network features a unique guardbanding technique for reducing the doubling of leakage current for every  $+10^\circ C$  increase in temperature. The CA5420A operates at total supply voltages from 2V to 20V either single or dual supply. This operational amplifier is internally phase compensated to achieve stable operation in the unity gain follower configuration. Additionally, it has access terminals for a supplementary external capacitor if additional frequency roll-off is desired. Terminals are also provided for use in applications requiring input offset voltage nulling. The use of PMOS in the input stage results in common-mode input voltage capability down to 0.45V below the negative supply terminal, an important attribute for single supply application. The output stage uses a feedback OTA type amplifier that can swing essentially from rail-to-rail. The output driving current of 1.0mA (Min) is provided by using nonlinear current mirrors.

This device has guaranteed specifications for 5V operation over the full military temperature range of  $-55^\circ C$  to  $+125^\circ C$ .

The CA5420A has the same 8 lead pinout used for the industry standard 741.

## Functional Diagram

## Features

- CA5420A at 5V Supply Voltage with Full Military Temperature Range Guaranteed Specifications
- CA5420A Guaranteed to Operate from  $\pm 1V$  to  $\pm 10V$  Supplies
- 2V Supply at 300 $\mu A$  Supply Current
- 1pA (Typ) Input Current (Essentially Constant to  $+85^\circ C$ )
- Rail-to-Rail Output Swing (Drive  $\pm 2mA$  Into 1k $\Omega$  Load)
- Pin Compatible with 741 Op Amp
- Pb-Free Available (RoHS Compliant)

## Applications

- pH Probe Amplifiers
- Picoammeters
- Electrometer (High Z) Instruments
- Portable Equipment
- Inaccessible Field Equipment
- Battery Dependent Equipment (Medical and Military)
- 5V Logic Systems
- Microprocessor Interface

# CA5420A

## Ordering Information

PART NUMBER (Note 3)	PART MARKING	TEMP. RANGE (°C)	PACKAGE (Pb-Free)	PKG. DWG. #
CA5420AM	5420A	-55 to +125	8 Ld SOIC	M8.15
CA5420AMZ (Notes 1, 2)	5420 AMZ	-55 to +125	8 Ld SOIC (Tape and Reel)	M8.15

### NOTES:

1. Add "96" suffix for Tape and Reel. Please refer to [TB347](#) for details on reel specifications.
2. These Intersil Pb-free plastic packaged products employ special Pb-free material sets, molding compounds/die attach materials, and 100% matte tin plate plus anneal (e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb-free soldering operations). Intersil Pb-free products are MSL classified at Pb-free peak reflow temperatures that meet or exceed the Pb-free requirements of IPC/JEDEC J STD-020.
3. For Moisture Sensitivity Level (MSL), please see device information page for [CA5420A](#). For more information on MSL please see techbrief [TB363](#).

## Pinout

NOTE: Pin is connected to Case.

# CA5420A

## Absolute Maximum Ratings

Supply Voltage (Between V+ and V- Terminals)	22V
Differential Input Voltage	15V
Input Voltage	(V+ + 8V) to (V- - 0.5V)
Input Current	1mA
Output Short Circuit Duration (Note 4)	Indefinite
Temperature Range	-55°C to +125°C

## Thermal Information

Thermal Resistance (Typical, Note 5)	$\theta_{JA}$ (°C/W)	$\theta_{JC}$ (°C/W)
SOIC Package	157	N/A
Maximum Junction Temperature (Plastic Package)	+150°C	
Maximum Storage Temperature Range (All Types)	-65°C to +150°C	
Pb-Free Reflow Profile	see link below	
<a href="http://www.intersil.com/pbfree/Pb-FreeReflow.asp">http://www.intersil.com/pbfree/Pb-FreeReflow.asp</a>		

**CAUTION:** Do not operate at or near the maximum ratings listed for extended periods of time. Exposure to such conditions may adversely impact product reliability and result in failures not covered by warranty.

### NOTES:

- Short circuit may be applied to ground or to either supply.
- $\theta_{JA}$  is measured with the component mounted on an evaluation PC board in free air.

## Electrical Specifications

Typical Values Intended Only for Design Guidance. V+ = +5V; V- = GND, T<sub>A</sub> = +25°C

PARAMETER		SYMBOL	TEST CONDITIONS	CA5420A	UNITS	
Input Resistance		R <sub>I</sub>		150	TΩ

**NOTE:**

6. Parameters with MIN and/or MAX limits are 100% tested at +25°C, unless otherwise specified. Temperature limits established by characterization and are not production tested.

**Typical Applications**

**Picoammeter Circuit**

The exceptionally low input current (typically 0.2pA) makes the CA5420A highly suited for use in a picoammeter circuit. With only a single 10GΩ resistor, this circuit covers the range from ±1.5pA. Higher current ranges are possible with suitable switching techniques and current scaling resistors. Input transient protection is provided by the 1MΩ resistor in series with the input. Higher current ranges require that this resistor be reduced. The 10MΩ resistor connected to pin 2 of the CA5420A decouples the potentially high input capacitance often associated with lower current circuits and reduces the tendency for the circuit to oscillate under these conditions.

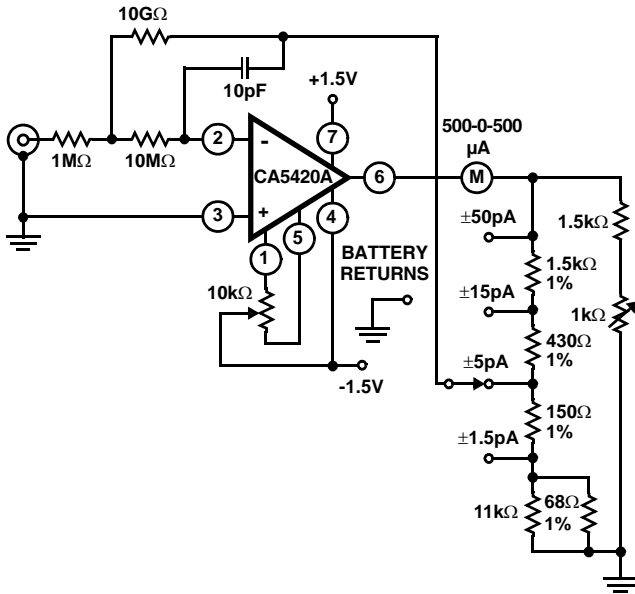

FIGURE 1. PICOAMMETER CIRCUIT

**High Input Resistance Voltmeter**

Advantage is taken of the high input impedance of the CA5420A in a high input resistance DC voltmeter. Only two 1.5V “AA” type penlite batteries power this exceedingly high-input resistance (>1,000,000MΩ) DC voltmeter. Full-scale deflection is ±500mV, ±150mV, and ±15mV. Higher voltage ranges are easily added with external input voltage attenuator networks.

The meter is placed in series with the gain network, thus eliminating the meter temperature co-efficient error term.

Supply current in the standby position with the meter undeflected is 300μA. At full-scale deflection this current rises to 800μA. Carbon-zinc battery life should be in excess of 1,000 hours.

**NOTES:**

7. Symbols are defined in the "MO Series Symbol List" in Section 2.2 of Publication Number 95.
8. Dimensioning and tolerancing per ANSI Y14.5M-1982.
9. Dimension "D" does not include mold flash, protrusions or gate burrs. Mold flash, protrusion and gate burrs shall not exceed 0.15mm (0.006 inch) per side.
10. Dimension "E" does not include interlead flash or protrusions. Interlead flash and protrusions shall not exceed 0.25mm (0.010 inch) per side.
11. The chamfer on the body is optional. If it is not present, a visual index feature must be located within the crosshatched area.
12. "L" is the length of terminal for soldering to a substrate.
13. "N" is the number of terminal positions.
14. Terminal numbers are shown for reference only.
15. The lead width "B", as measured 0.36mm (0.014 inch) or greater above the seating plane, shall not exceed a maximum value of 0.61mm (0.024 inch).
16. Controlling dimension: MILLIMETER. Converted inch dimensions are not necessarily exact.
