## 8-CHANNEL HIGH DEFINITION AUDIO CODEC

## STAC9227/9228/9228D

### Description

The STAC9227/9228/9228D are a family of Theater Quality 8-channel audio CODECs that enable systems with 7.1 audio or 5.1 audio playing simultaneously with VoIP or another stereo audio stream. SigmaTel's proprietary  $\Sigma\Delta$  technology provides high fidelity with an estimated DAC SNR up to 105dB. Up to four digital microphones are supported enabling high quality voice input for increased usability of voice applications.

### Features

- **High performance HD Audio CODEC provides Theater Quality Audio**
- **High performance  $\Sigma\Delta$  technology**
  - 105dB DAC SNR
  - 90dB ADC SNR
- **Four Stereo DACs and three stereo ADCs**
  - Supports 7.1 audio or 5.1 audio with simultaneous Real Time Communication (RTC) channel such as VoIP or separate stereo audio stream
- **24-bit resolution with up to 192 KHz sample rates**
- **Digital Microphone Interface (STAC9228X/D only)**
  - Direct interface up to four Digital Microphones
- **Analog Stereo Microphone**
  - Microphone Boost 0, 10, 20, 30, 40dB
  - Six adjustable Vref outputs for microphone bias
- **Integrated Headphone Amps (3).**
- **S/PDIF In and Out**
- **Volume Up/Down Control**
- **Jack Insertion Detect and Impedance Sensing Supports Jack Retasking and Universal Jacks**
- **Digital PC BEEP to all outputs**
- **+3.3 V to +5 V analog power supply options**
- **Environmental 48-pin LQFP package option**

### Software Support

- **SKPI (Kernel Processing Interface)**
  - Enables plug-ins that can operate globally on all audio streams of the system
- **12 band parametric equalizer SKPI plug-in**
  - Constant, system-level effects tuned to optimize a particular platform can be combined with user-mode "presets" tailored for specific acoustical environments and applications
  - System-level effects automatically disabled when external connections made
- **Dynamics Processing SKPI plug-in**
  - Enables improved voice articulation
  - Compressor/limiter allows higher average noise level without resonances
- **Dolby Home Theatre (STAC9228D)**
- **Dolby Technologies**
  - Dolby Headphone™, Dolby Virtual Speaker™
  - Dolby ProLogic II™, Dolby ProLogic IIx™
  - Dolby Digital Live™
- **Intel Audio Studio™ from Sonic Focus**
- **Maxx Player™ from Waves**
- **Microphone Beam Forming, Acoustic Echo Cancellation, & Noise Suppression from Knowles™**

## 1. DESCRIPTION

The STAC9227/9228/9228D are high fidelity, 8-channel audio CODECs compatible with the Intel High Definition (HD) Audio Interface. The STAC9227/9228/9228D CODECs provide high quality, HD Audio capability to notebook and cost sensitive desktop PC applications.

The STAC9227/9228/9228D incorporate SigmaTel's proprietary technology to achieve a DAC SNR in excess of 100 dB. The higher performance and quality of SigmaTel's audio solutions brings consumer electronics level performance to the notebook, desktop and media center PC.

The STAC9227/9228/9228D provide stereo 24-bit, full duplex resolution supporting sample rates up to 192 KHz by the DAC and ADC. The STAC9227/9228/9228D SPDIF In/Out support sample rates of 96 KHz, 48 KHz and 44.1 KHz plus SPDIF OUT supports 88.2 KHz. Additional sample rates are supported by the driver software.

The STAC9227/9228/9228D support all desired eight channel configurations, including switchable Headphone Out, and Universal Jacks™ functionality for jack detection and re-tasking. The SPDIF interface provides connectivity to Consumer Electronic equipment like Dolby Digital decoders, powered speakers, mini disk drives or to a home entertainment system. All analog I/O pairs support LINE\_IN, LINE\_OUT and MIC.

MIC inputs can be programmed with 0/10/20/30/40dB boost. For more advanced configurations, the STAC9227/9228/9228D has up to four General Purpose I/O (GPIO) pin. The STAC9227/9228/9228D also provide a single ended CD input for compatibility with DRM solutions and to support legacy OS issues.

The STAC9227/9228/9228D integrate a headphone amplifier which is available on Ports A, B and D. The headphone amplifier is dedicated to these three outputs for increased flexibility, enhanced user experience, and reduced implementation costs.

The Universal Jack capabilities allow the CODECs to detect when audio devices are connected to the CODEC, and to allow the CODECs to be reconfigured to support these devices regardless of which port they are plugged into the system. SPDIF input sensing is also supported. The fully parametric SigmaTel SoftEQ can be initiated upon headphone jack insertion and removal for protection of notebook speakers. Note: The Jack Detect circuit and component selection are critical for accurate detection of audio jacks on individual ports. Please see the reference design for circuit implementation details.

The STAC9227/9228/9228D operate with a 3.3 V digital supply and a 3.3 V to 5 V analog supply.

The STAC9227/9228/9228D are available in a 48-pin LQFP Environmental (ROHS) package.

ADC SNR:	90dB	A-Weighted	5.0 V +/- 5%

### 2.2. Electrical Specifications

#### 2.2.1. Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the STAC9227/9228/9228D. These ratings, which are standard values for IDT commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

Item	Pin	Maximum Rating
Analog maximum supply voltage	AVdd	6 Volts
Digital maximum supply voltage	DVdd	5.5 Volts
VREFOUT output current		5 mA
Voltage on any pin relative to ground		Vss - 0.3 V to Vdd + 0.3 V
Operating temperature		0°C to +70°C
Storage temperature		-55 °C to +125 °C
Soldering temperature		260 °C for 10 seconds * Soldering temperature information for all available packages begins on page 228.

#### 2.2.2. Recommended Operation Conditions

Parameter		Min.	Typ.	Max.	Units
Power Supply Voltage	Digital - 3.3 V	3.135	3.3	3.465	V
	Analog - 3.3 V	3.135	3.3	3.465	V
(Note: With Supply Override Enable Bit set to force 5 V operation.)	Analog - 4 V	3.8	4	4.2	V
	Analog - 4.5 V	4.275	4.5	4.725	V
	Analog - 5 V	4.75	5	5.25	V
Ambient Operating Temperature		0		+70	°C
Case Temperature	T <sub>case</sub> (48-LQFP)			+90	°C

**ESD:** The STAC9227/9228/9228D is an ESD (electrostatic discharge) sensitive device. The human body and test equipment can accumulate and discharge electrostatic charges up to 4000 Volts without detection. Even though the STAC9227/9228/9228D implements internal ESD protection circuitry, proper ESD precautions should be followed to avoid damaging the functionality or performance.

- Ratio of Full Scale signal to noise output with -60dB signal, measured "A weighted" over a 20 Hz to a 20 KHz bandwidth.
- ± 3dB limits for Line Output & 0 dB gain, at -20dBV
- Amplitude of THD+N, measured with A-weighting filter, over 20 Hz to 20 KHz bandwidth.
- Ratio of Full Scale signal to idle channel noise output is measured "A weighted" over a 20 Hz to a 20 KHz bandwidth. (AES17-1991 Idle Channel Noise or EIAJ CP-307 Signal-to-noise Ratio).
- Peak-to-Peak Ripple over Passband meets ± 0.25dB limits, 48 KHz Sample Frequency.
- Stop Band rejection determines filter requirements. Out-of-Band rejection determines audible noise.
- The integrated Out-of-Band noise generated by the DAC process, during normal PCM audio playback, over a bandwidth 28.8 to 100 KHz, with respect to a 1 Vrms DAC output.
- Can be set to 0.5 or 0.8 AVdd.

### 3. DETAILED DESCRIPTION

#### 3.1. Universal Jacks™

SigmaTel's Universal Jacks™ technology allows for the greatest flexibility in board design and implementation.

For the STAC9227/9228/9228D family the Universal Jacks™ capabilities are as follows<sup>1</sup>:

- Ports A, B, and D support<sup>2</sup>:
  - Headphone Out
  - Line Out
  - Line In
  - Microphone with 0/10/20/30/40 dB Microphone boost<sup>3</sup>:
- Ports C, E, F, G, H support<sup>2</sup>:
  - Line Out
  - Line In
  - Microphone with 0/10/20/30/40 dB Microphone boost<sup>3</sup>:
    - Ports G & H do not have VrefOut Support

*Note<sup>1</sup>: On the STAC9227/9228/9228D family, only one function can be selected on each pin pair at a time. For example, a pin pair cannot be configured as an input and output at the same time. Configuration can be changed at any time.*

*Note<sup>2</sup>: Three Headphones should not be used simultaneously. Performance degradation will occur when using two Headphones simultaneously. See electrical specifications for details.*

*Note<sup>3</sup>: When the 40dB microphone boost feature is enabled, gain increases greater than 6dB may result in significant audio quality degradation of the microphone audio input. In particular, when the 40dB MIC boost is active, the SNR, THD+N and DC offset will significantly degrade regardless of the input signal level.*

##### 3.1.1. Audio Jack Presence Detect

SENSE\_A pin is used to detect the presence of plugs in ports A, B, C, and D. SENSE\_B pin is used to detect the presence of plugs in ports E, F, G, and H. Refer to the reference design for port detect circuitry. Select the precision of the resistors used as follows:

AVDD Nominal Voltage (+-5%)	Resistor Tolerance Sense A (If Port D is used)	Resistor Tolerance Sense A (If Port D is not used)	Resistor Tolerance Sense B (If Port H is used)	Resistor Tolerance Sense B (If Port H is not used)
5 V	1%	1%	1%	1%
4.5 V	1%	1%	1%	1%
4 V	0.50%	1%	0.50%	1%
3.3 V	0.10%	1%	0.10%	1%

### 3.2. Impedance Sense

Impedance Sense is accomplished by on-chip circuitry that measures the impedance at the pin of the chip and compares it to internal reference impedance. Below is a table that contains the bin information and codes returned when the pin widget impedance field in the Port Pin Sense widget is read. Please note that even under the best conditions, there is no method to guarantee 100% impedance sensing due to variations in external circuitry and impedance overlap of devices that can be plugged into a jack. The impedance sense table reflects both standard Line Out and Headphone output drivers. Please reference the HD Audio Universal Jack Application Note on the SigmaTel Extranet for more information.

**Table 1: Impedance Sense**

Bins	Return Hex Code	Impedance Level (Ohms)	General Device Detected
000b	0064h	Impedance < 300 $\Omega$	Passive Speakers, Headset Speakers
001b	012Ch	Impedance = 300 $\Omega$ +/- 25%	Some Headset Speakers
010b	028Ah	300 $\Omega$ > Impedance < 1275 $\Omega$	Some Microphones
011b	03E8h	Impedance = 1275 $\Omega$ +/- 25%	Microphones
100b	07D0h	1275 $\Omega$ > Impedance < 2000 $\Omega$	Microphones
101b	0BB8h	Impedance = 2000 $\Omega$ +/- 25%	Amplified Speakers

111b	2710h	> 2000 $\Omega$	Amplified Speakers, Line In

### 3.3. SPDIF Input

SPDIF IN can operate at 44.1 KHz, 48 KHz and 96 KHz, and implements internal Jack Detect.

A sophisticated digital PLL allows automatic rate detection and accurate data recovery. The ability to accept consumer SPDIF voltage levels directly eliminates the need for costly external receiver ICs. Advanced features such as record slot select and SPDIF\_IN routing to the DAC allows for simultaneous record and play.

### 3.4. SPDIF Output

SPDIF Output can operate at 44.1 KHz, 48 KHz, 88.2 KHz, and 96 KHz, as defined in the Intel High Definition Audio Specification, with resolutions up to 24 bits. This insures compatibility with all consumer audio gear and allows for convenient integration into home theater systems and media center PCs.

### 3.5. Digital Microphone Support (STAC9228X/D)

The digital microphone interface permits connection of a digital microphone(s) to the STAC9228 via the DMIC0, DMIC1, and DMIC\_CLK 3-pin interface. The DMIC0 and DMIC1 signals are inputs that

carry individual channels of digital microphone data to the STAC927x family. In the event that a single microphone is used, the data is routed to both ADC channels.

The DMIC\_CLK output is programmable from 1.176 MHz to 4.704 MHz in 1.176 MHz increments, and is synchronous to the 24 MHz internal clock. The default frequency is 2.352 MHz.

The STAC927x family supports the following digital microphone configurations:

**Table 2. Valid Digital Microphone Configurations**

Digital Mics	Date Sample	ADC Conn.	Notes
0	N/A	N/A	No Digital Microphones
1	Single Edge	0, 1, or 2	Available on either DMIC_0 or DMIC_1 Both ADC Channels produce data, may be in phase or out by 1/2 DMIC_CLK period depending upon external configuration and timing
2	Double Edge on either DMIC_0 or 1 OR Single Edge on DMIC_0 and 1	0, 1, or 2	Available on either DMIC_0 or DMIC_1, External logic required to support sampling on a single Digital Mic pin channel on rising edge and second Digital Mic right channel on falling edge of DMIC_CLK for those digital microphones that don't support alternative clock edge capability. If both DMIC_0 and DMIC_1 are used to support 2 digital microphones, 2 separate ADC units will be used, however, this configuration is not recommended since it consumes two stereo ADC resources.
3	Double Edge on one DMIC pin and Single Edge on the second DMIC pin.	0, 1, or 2	Requires both DMIC_0 or DMIC_1, External logic required to support sampling on a single Digital Mic pin channel on rising edge and second Digital Mic right channel on falling edge of DMIC_CLK for those digital microphones that don't support alternative clock edge capability. Two ADC units are required to support this configuration
4	Double Edge	0, 1, or 2	Connected to DMIC_0 and DMIC_1, External logic required to support sampling on a single Digital Mic pin channel on rising edge and second Digital Mic right channel on falling edge of DMIC_CLK for those digital microphones that don't support alternative clock edge capability. Two ADC units are required to support this configuration

**Table 3. DMIC\_CLK, DMIC\_0 and DMIC\_1 Operation During Power States**

Power State	DMIC Widget Enabled?	DMIC_CLK Output	DMIC_0,1	Notes
D0	Yes	Clock Capable	Input Capable	DMIC_CLK Output is Enabled when either DMIC_0 or DMIC_1 Input Widget is Enabled. Otherwise, the DMIC_CLK remains Low
D1	Yes	Clock Capable	Input Capable	DMIC_CLK Output is Enabled when either DMIC_0 or DMIC_1 Input Widget is Enabled. Otherwise, the DMIC_CLK remains Low
D2	Yes	Clock Disabled	Input Disabled	DMIC_CLK Remains Low

**11. REVISION HISTORY**

<b>Revision</b>	<b>Date</b>	<b>Description of Change</b>
0.3	July 2005	Initial release.
0.5	August 2005	Updated Pin Outs and Pin Tables, Added Updated performance tables to show all voltage options, Updated Diagrams, Added Widget Diagram, Added Pin Configuration Default Register Settings Table, Added Part Numbers. Added 56-QFN Reflow Profile Information. Added Widget Information. Updated ESD Information. Added 40dB Boost Information.
0.7	May 2006	Updated logo. Added ADAT logo. Added Audio Jack Presence Detect section. Updated Power Consumption numbers.
0.82	8 October 2006	Initial release in IDT format.
1.0	March 2007	Removed 56 QFN package option for STAC9230. Corrected the missing "X" in the orderable part number.
1.1	January 2008	Removed STAC9229, STAC9230, STAC9227D options, as EOL issued.
