8.0 Switch Truth Table

Table 5 Switch Truth Table

V1	V2	Active RF Path
0	1	All OFF
0	0	ANT-TX
1	0	ANT-RX

Attention:
[1] VDD should be applied first before V1 and V2, otherwise may cause damage to the device.
[2] There are internal pull-downs to ground on both V1 and V2 control pins, the state at start-up without any control voltage applied will be ANT-TX ON.
[3] If all OFF state is not used, the switch can be operated with single control pin V1.

9.0 Evaluation Board

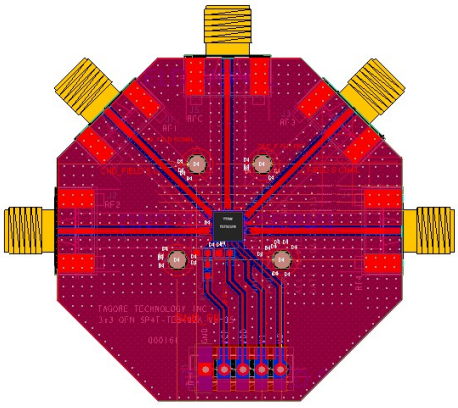

Figure 4 Evaluation Board Image

Attention:
[1] 17 refers to the center pad of the device.
[2] The purpose of connection between VCP and connector N1 is to monitor VCP, do not apply external voltage to VCP.
[3] Below 4GHz, no match required on ANT port.
[4] For 4.4~5GHz : Add 0.3pF (Passive Plus 0402N0R3AW251) to GND close to RFC pin.
